Kido Care: Pregnancy and Baby Care Website

Project documentation by Emad and Lana for the Afro-Asian Forum for Innovation and Technology, Aswan 2026.

1. Project Overview | نظرة عامة على المشروع

Field	Value
Project Title	Kido Care: Pregnancy and Baby Care Website
Project Type	Static website (HTML, CSS and JavaScript, no server)
Description	Kido Care is a website for pregnant women and new mothers. It explains pregnancy week by week and baby care month by month. Mothers can also book a doctor, ask a question, order vitamins and tick off vaccines and tests.
Target Users	Pregnant women, mothers of babies up to one year old, and their families.
Team	Emad and Lana
Shown at	Afro-Asian Forum for Innovation and Technology, Aswan 2026

Tech Stack | التقنيات المستخدمة

Category	Technology	Purpose
Pages	HTML5	23 pages, one file per screen. Forms use built-in checks: `required`, `type="email"`, `type="tel"`, a date picker and a time list.
Styling	CSS3 (`style.css`, 1,520 lines)	Both colour themes, the layout, the doctor picker (`:target`) and the checklist (`:has(input:checked)`).
Scripts	Plain JavaScript (2 files, 117 lines)	`weeks.js` builds the week page. `script.js` runs Kido Bot.

Category	Technology	Purpose
Font	Poppins (Google Fonts)	Loaded at the top of `style.css`.
Images	PNG and JPEG files in `assets/`	Logo, illustrations, medicine and vaccine icons, doctor photos.

No libraries, no build step and no package manager: open `index.html` in a browser.

2. Problem Statement | المشكلة

Pregnant women and new mothers have many questions, and the answers they get from family, friends and social media often disagree. It is hard to know what is normal this week, which test or vaccine is due, and when to call a doctor. Kido Care brings simple, organized answers into one place.

Why does it matter? | لماذا هذا مهم؟

A missed test or vaccine, or a warning sign noticed too late, can put the mother or the baby at risk. Worry and confusion also make pregnancy and the first year harder than they need to be.

How is it currently solved? | كيف تُحل المشكلة حاليًا؟

Today mothers ask relatives, search online, or wait for the next clinic visit. Online answers are often long articles, mixed with ads and not organized by week. Booking a doctor usually means several phone calls.

3. Technical Architecture | البنية التقنية

```

Architecture and Data Flow | تدفق البيانات

```
Browser
    → opens an .html file (no server code runs)
        → style.css draws the page
           body.baby-theme switches blue to mint on the baby pages
        → links move between pages
           "Book Now" → pregnancy-booking.html#doctor-3
           CSS :target shows only that doctor's panel
        → forms check their own fields, then open the "-success" page
           the answers go into the address bar and are not kept
        → week.html runs weeks.js: reads #week-20, picks WEEKS[20], writes the page
        → chatbot.html runs script.js: looks for key words, answers
```

There is no server, database or account system. Every screen is a file you can open and read top to bottom.

HOW "BOOK NOW" PICKS THE DOCTOR

LINK

Book Now

href="pregnancy-booking.html#doctor-3"

↓

ONE PAGE

Every doctor is already there

39 hidden panels on the pregnancy page, 20 on the baby page

↓

CSS :TARGET

Only #doctor-3 shows

No #? Then "Choose a doctor first".

No JavaScript here. The checklist works the same way: CSS :has(input:checked) turns a ticked row green.

Key Files | الملفات الأساسية

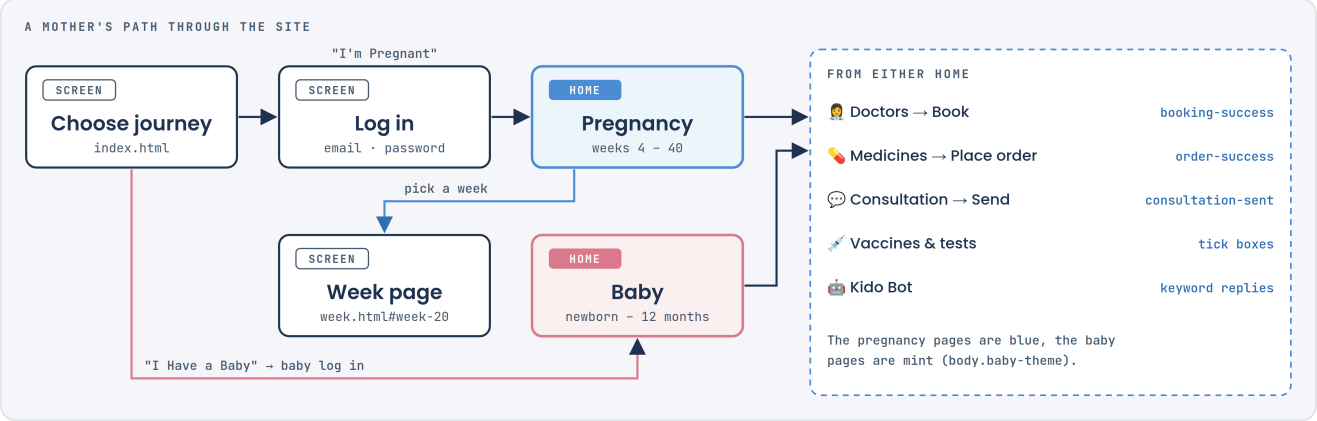

File	Purpose
`weeks.js`	Holds `WEEKS`, one entry for each week from 4 to 40 with the baby's size, how the baby grows, how the mother may feel, a to-do list, tests and an eating tip. Also `TRIMESTER` and `WARN` (warning signs for each trimester). `show()` reads the week from the address, works out the trimester (under 14, under 28, or later) and the weeks to go, then writes the page.
`script.js`	`botReply()` checks the message for key words in English and Arabic (bleeding / نزيف, hello / اهلا / مرحبا, doctor / دكتور, week, nausea, vaccine, medicine, feed, thank) and returns one reply. Danger words are checked first.
`style.css`	The colour tokens (`--rose`, `--sage`, …) and their mint values under `body.baby-theme`. The `.doctor-panel:target` rule for booking, the `.check-item:has(input:checked)` rule for the checklist, and the five week box headings, which are added with `::before`.
`pregnancy-booking.html`	All 39 doctor panels are in the page. Only the one named after `#` in the address is shown. With no `#`, it says "Choose a doctor first".

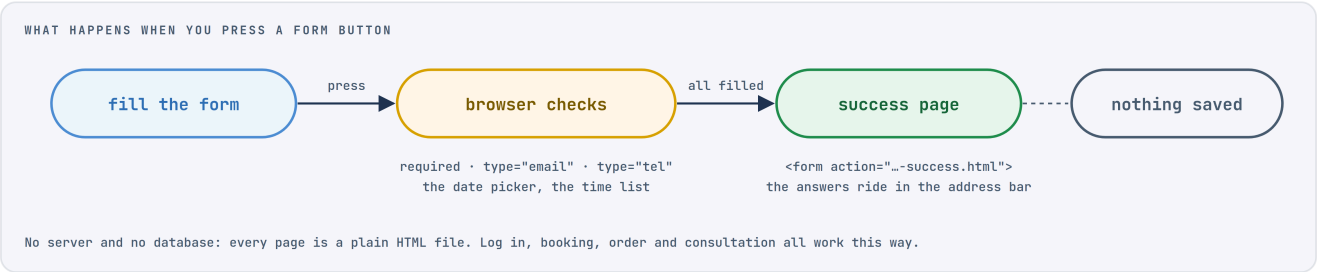

4. Features & User Flow | المميزات ورحلة المستخدم

Feature List | قائمة المميزات

#	Feature	Description	Status
1	Choose a journey	Two cards on the first page: "I'm Pregnant" and "I Have a Baby". Each journey has its own colours and menu.	Complete
2	Log in	Email and password, checked for format only.	Demo only: any email and password let you in.
3	Pregnancy week by week	37 weeks (4 to 40) in three trimesters. Each week has the baby's size, development, how you may feel, a to-do list, tests, an eating tip, warning signs, and previous / next links.	Complete
4	Baby month by month	Six stages: newborn, 2, 4, 6, 9 and 12 months.	Complete
5	Book a doctor	39 pregnancy doctors and 20 pediatricians, each with a rating. The form asks for name, phone, date, one of 8 time slots, and a reason.	Demo only: the request is not sent.
6	Ask a doctor	Name, phone and a question.	Demo only: the question is not sent.
7	Medicines and vitamins	5 pregnancy items and 5 baby items with prices in EGP, a quantity box for each, and a phone number and address for delivery.	Demo only: no order is placed. Prices are examples.
8	Vaccines and tests checklist	11 pregnancy items and 8 baby items, each with its timing and a Test / Vaccine / Visit tag. A ticked row turns green.	Complete. Ticks are lost when the page reloads.
9	Kido Bot	A chat box that answers simple questions in English and Arabic and warns about bleeding, severe pain or fever.	Complete. Key words only, not real understanding.

User Flow | رحلة المستخدم

```
Choose your journey (index.html)
    → "I'm Pregnant" → Log in (pregnancy-signin.html) → Pregnancy home
        → pick a week → week.html#week-N → previous / next / all weeks
    → "I Have a Baby" → Log in (baby-signin.html) → Baby home (month by month)

From either home:
    Doctors → Book Now → booking.html#doctor-N → Confirm Booking → booking-success
    Medicines → quantities + delivery → Place Order → order-success
    Consultation → Send Question → consultation-sent
    Vaccines & Tests → tick what is done
    Chatbot → Kido Bot
```

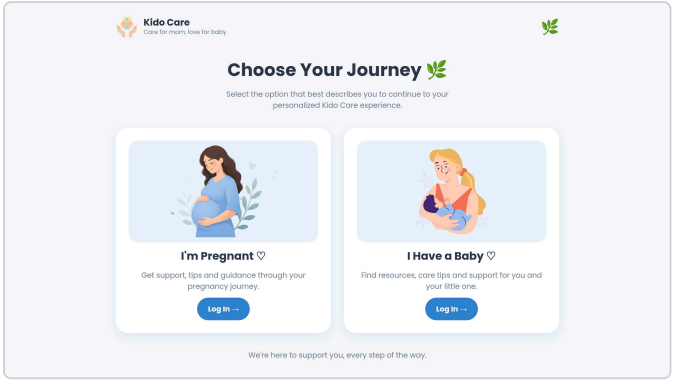

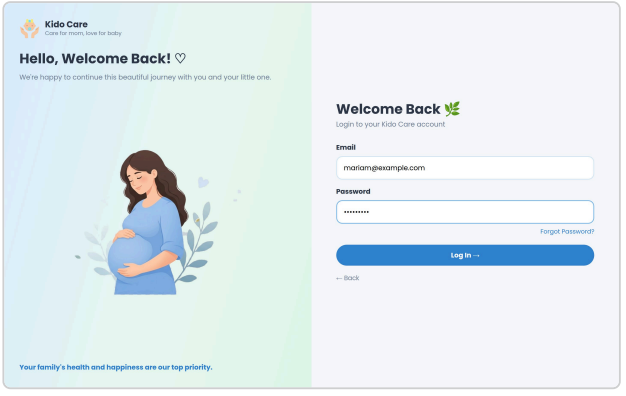

Screen Reference | الشاشات

Screen	File	Journey	Description
Choose your journey	`index.html`	Both	Two cards, each with a "Log In" button.
Log in	`pregnancy-signin.html`, `baby-signin.html`	Each	Email, password, "Forgot Password?" and "← Back".
Pregnancy home	`pregnancy-home.html`	Pregnancy	Welcome bar, hero, 37 week buttons by trimester, 4 service cards.
Week page	`week.html`	Pregnancy	One week's details, the trimester's warning signs and three action buttons.

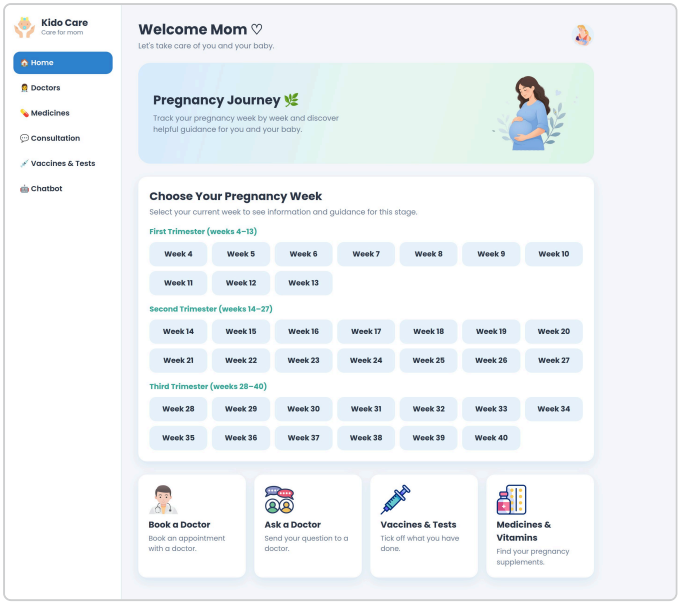

Screen	File	Journey	Description
Baby home	`baby-home.html`	Baby	Welcome bar, hero, a photo banner, six stage cards and 4 service cards.
Doctors	`*-doctors.html`	Each	A grid of doctor cards with rating, specialty and "Book Now".
Booking	`*-booking.html`	Each	The chosen doctor and the appointment form.
Medicines	`*-medicines.html`	Each	Item cards with price and quantity, then delivery details.
Consultation	`*-consultation.html`	Each	Name, phone and question.
Vaccines & tests	`*-vaccines.html`	Each	A checklist with timing and tags.
Done pages	`*-booking-success.html`, `*-order-success.html`, `*-consultation-sent.html`	Each	A tick, a thank-you line and two buttons.
Kido Bot	`chatbot.html`	Both	A chat window with a text box and "Send".

Design System | نظام التصميم

Element	Current implementation
Logo	The site shows `assets/logo.png`: a baby's face with a bow and a pacifier, held in two open hands. The poster and slides use the new logo: a mother holding her baby inside a blue ring, with a heart, a medical cross and leaves.
Pregnancy colours	Blue: `#3182CE` for buttons and links, `#7CB8EA` and `#E8F4FC` for soft fills
Baby colours	Mint: `#2FA58F` for buttons and links, `#8FD6C0` and `#E3F6EE` for soft fills (`body.baby-theme`)
Background and text	Page `#F5F7FA`, cards white, text `#2D3748`, muted text `#718096`
Hero	A soft gradient from blue to mint, `linear-gradient(105deg, #d8ecff, #e8f8f0, #dff5ea)`
Cards	White, `18px` rounded corners, a soft blue shadow
Font	Poppins (400–700). The poster and slides add Fredoka for big titles.
Layout	A left sidebar menu with emoji icons and "Log out", the content on the right
Feedback	Ticked checklist rows turn green. Done pages show a large ✓. Kido Bot's urgent replies start with ⚠️.

6. Data & Limits | البيانات والحدود

Where the Content Lives | مصدر المحتوى

Source	Type	Description
`weeks.js`	Written content	37 weeks of advice, 3 trimester names and 3 lists of warning signs.
`baby-home.html`	Written content	Six stage tips, newborn to 12 months.
`*-doctors.html`	Written content	59 doctors: name, specialty and rating (4.8 or 4.9). Every location says "📍 Location".
`*-medicines.html`	Written content	10 items with descriptions and prices from 45 to 150 EGP.
`*-vaccines.html`	Written content	19 checklist items with their timing.
`script.js`	Written content	Kido Bot's replies.
Forms	User input	Log in, booking, medicines and consultation. Checked in the browser, then dropped.

How the Content Is Stored | كيف يُخزن المحتوى

There is no database. All content is written straight into the HTML and JavaScript files. This is how the main lists are shaped in the code:

List	Where	Fields
Weeks	`WEEKS` in `weeks.js`	week number → [baby's size, development, how you may feel, to-do list, tests, eating tip]
Warning signs	`WARN` in `weeks.js`	one text per trimester
Doctors	`<article class="doctor-card">`	rating, photo, name, specialty, location, booking link `#doctor-N`
Medicines	`<div class="medicine-card">`	photo, name, description, price, quantity input
Checklist	`<label class="check-item">`	checkbox, icon, name, timing, tag

Specialty	Doctors
Obstetrics & Gynecology	20
Maternal & Fetal Medicine	10
Women's Health	9
Pediatrics	16
Pediatrics & Neonatology	3
Pediatric Neurology	1

Limits | حدود المشروع

Found by reading the code. There is no README.

- Log in checks nothing: any email and password open the home page. "Forgot Password?" goes nowhere (`href="#"`).
- Bookings, orders and questions are not sent or saved. The success pages always appear.
- Checklist ticks are lost when the page reloads.
- Doctor locations all say "📍 Location". The 39 pregnancy doctors share one drawing for a photo.
- The baby doctors page uses photos and names that look like real doctors. Check you have permission before you show them in public.
- Medicine prices are examples (the page says so).
- `chatbot.html` always shows the baby menu, even when you come from the pregnancy pages. It also links `extra.css`, which does not exist.

- The site still shows the old logo (`assets/logo.png`). The poster and slides use the new one.
- Kido Bot only knows key words. It cannot answer new questions, and it is not medical advice.

7. What We Learned | ماذا تعلمنا

Building Kido Care, we practiced:

1. Building a multi-page website with HTML: links between 23 pages, forms, and the same sidebar layout on every page.
2. Using CSS variables to make two colour themes from one stylesheet, and `:target` and `:has()` to show content without JavaScript.
3. Storing 37 weeks of advice in one JavaScript object and drawing the right week from the address (`#week-20`).
4. Using HTML form checks (`required`, `type="email"`, `type="tel"`, a date picker) so people cannot send an empty or wrong form.
5. Planning a user journey: two starting paths that share the same services, with a clear "done" page after every form.
