FOOD DELIVERY · EGYPT

BYTE.ME

FOOD, ONE BYTE AWAY.

Pick a restaurant, fill your cart and order in a few taps. Then follow your order from pending to completed.

01 · WHY Ordering shouldn’t be hard.

THE PROBLEM المشكلة

Ordering by phone is slow

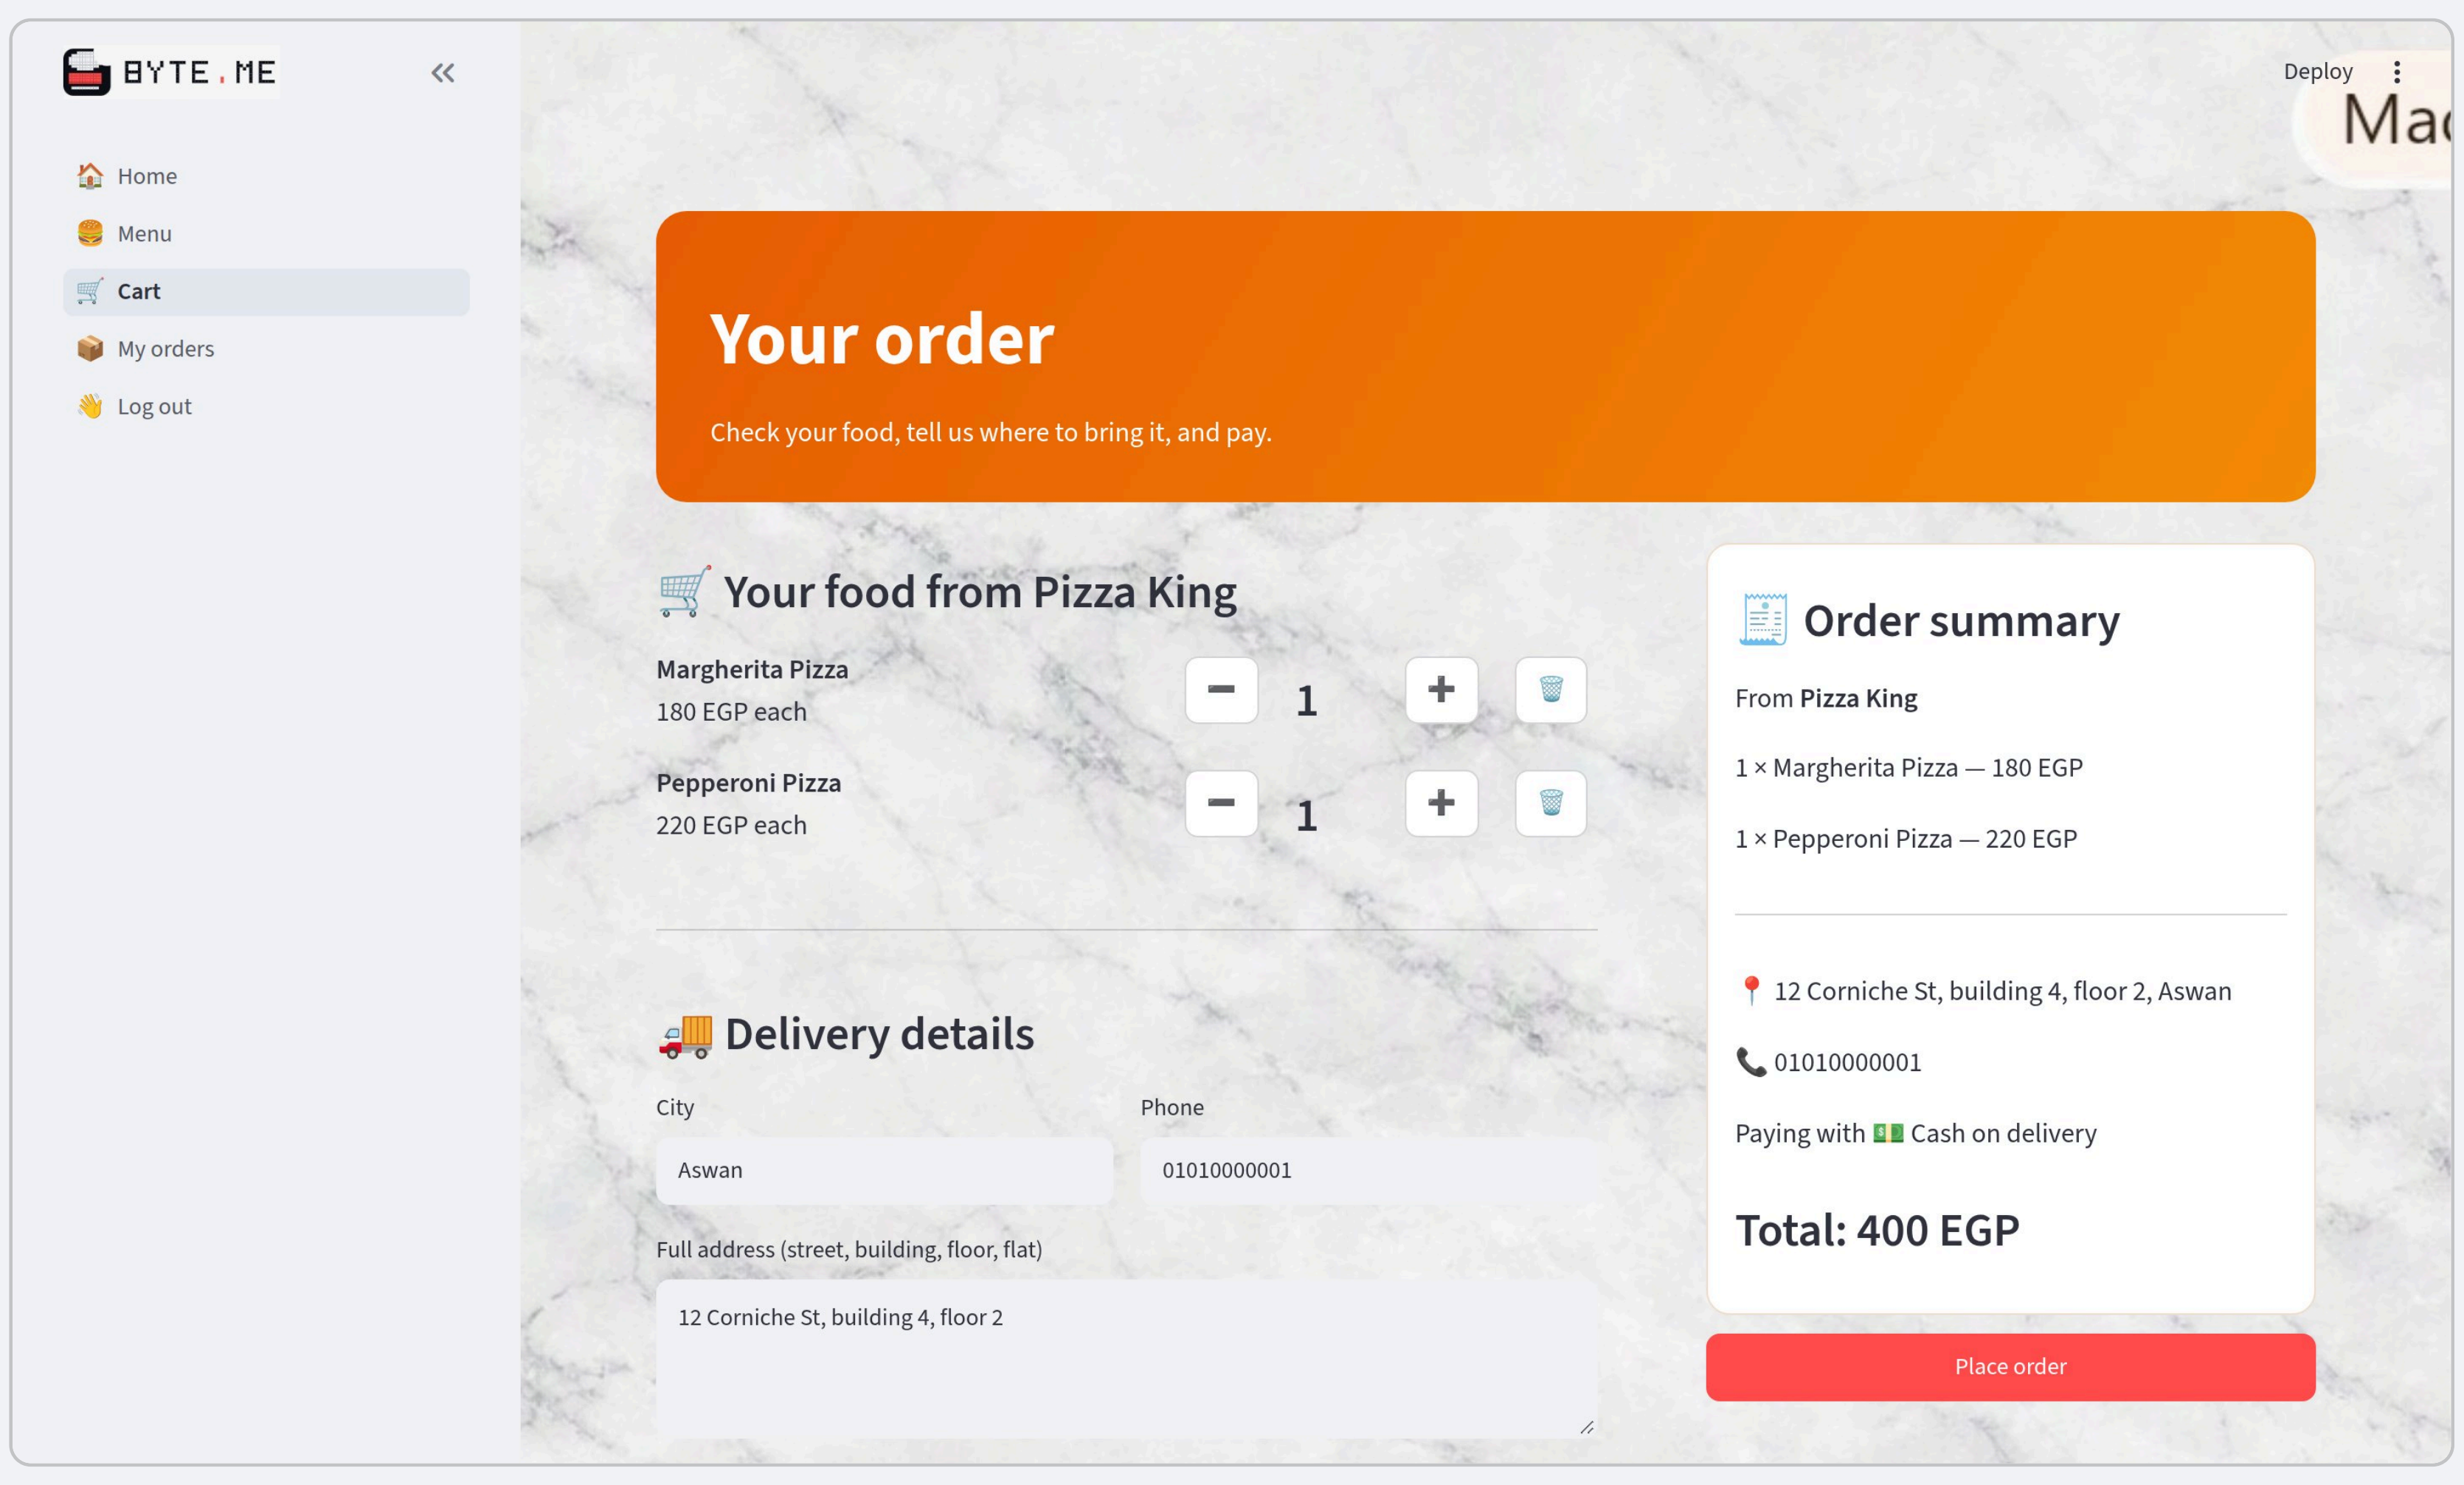
The line is busy, you can’t see the menu or the prices, and you don’t know when your food will come. Small restaurants lose orders because of it.

OUR SOLUTION الحل

One menu, one cart, one tap

BYTE.ME shows each restaurant’s dishes with photos and prices. You fill one cart, pay with cash, card or wallet, and follow your order in My orders.

02 · SEE IT From menu to doorstep. من القائمة إلى الباب



Your order

Check your food, tell us where to bring it, and pay.

🛒 Your food from Pizza King

Margherita Pizza
180 EGP each — 1 +

Pepperoni Pizza
220 EGP each — 1 +

🚚 Delivery details

City: Aswan

Phone: 01010000001

Full address (street, building, floor, flat): 12 Corniche St, building 4, floor 2

🧾 Order summary

From **Pizza King**

1 × Margherita Pizza — 180 EGP

1 × Pepperoni Pizza — 220 EGP

📍 12 Corniche St, building 4, floor 2, Aswan

📞 01010000001

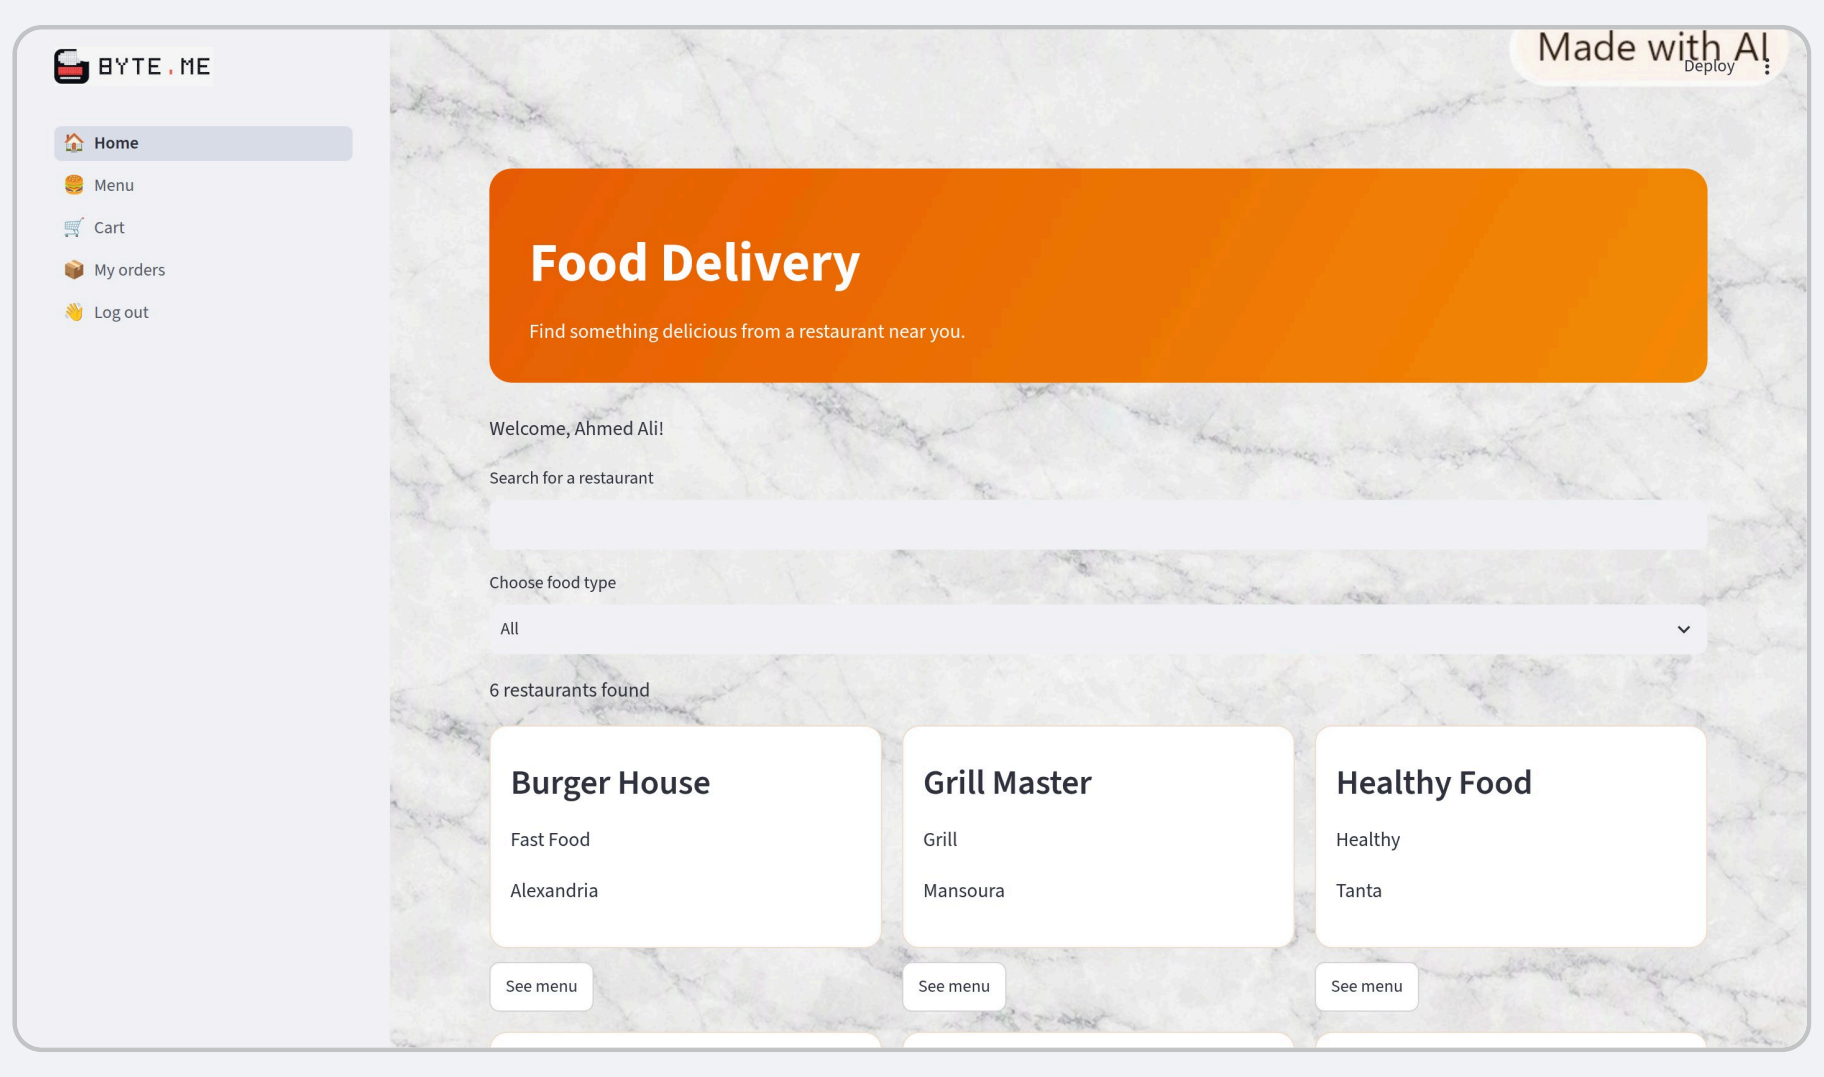
Paying with 💵 Cash on delivery

Total: 400 EGP

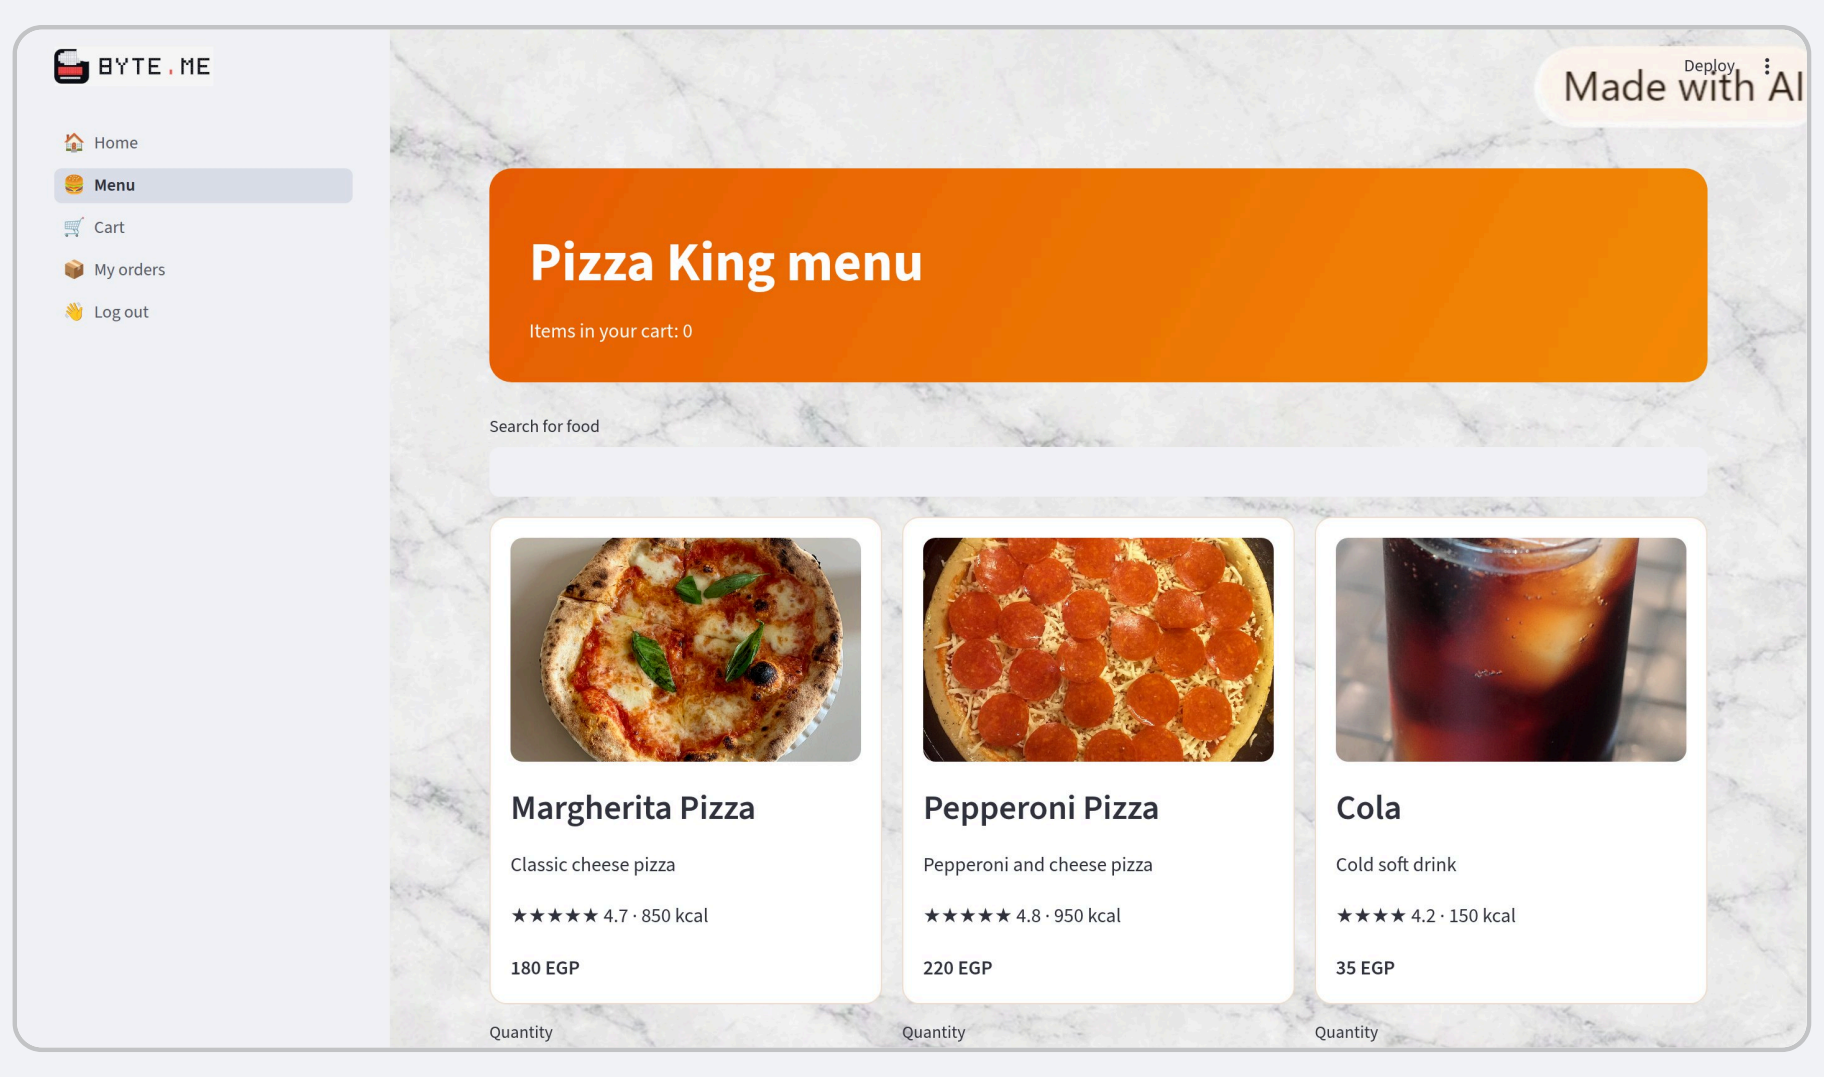
Place order

Checkout: two dishes from Pizza King, the delivery address, and a choice of cash, card or mobile wallet. The order summary adds up the total.

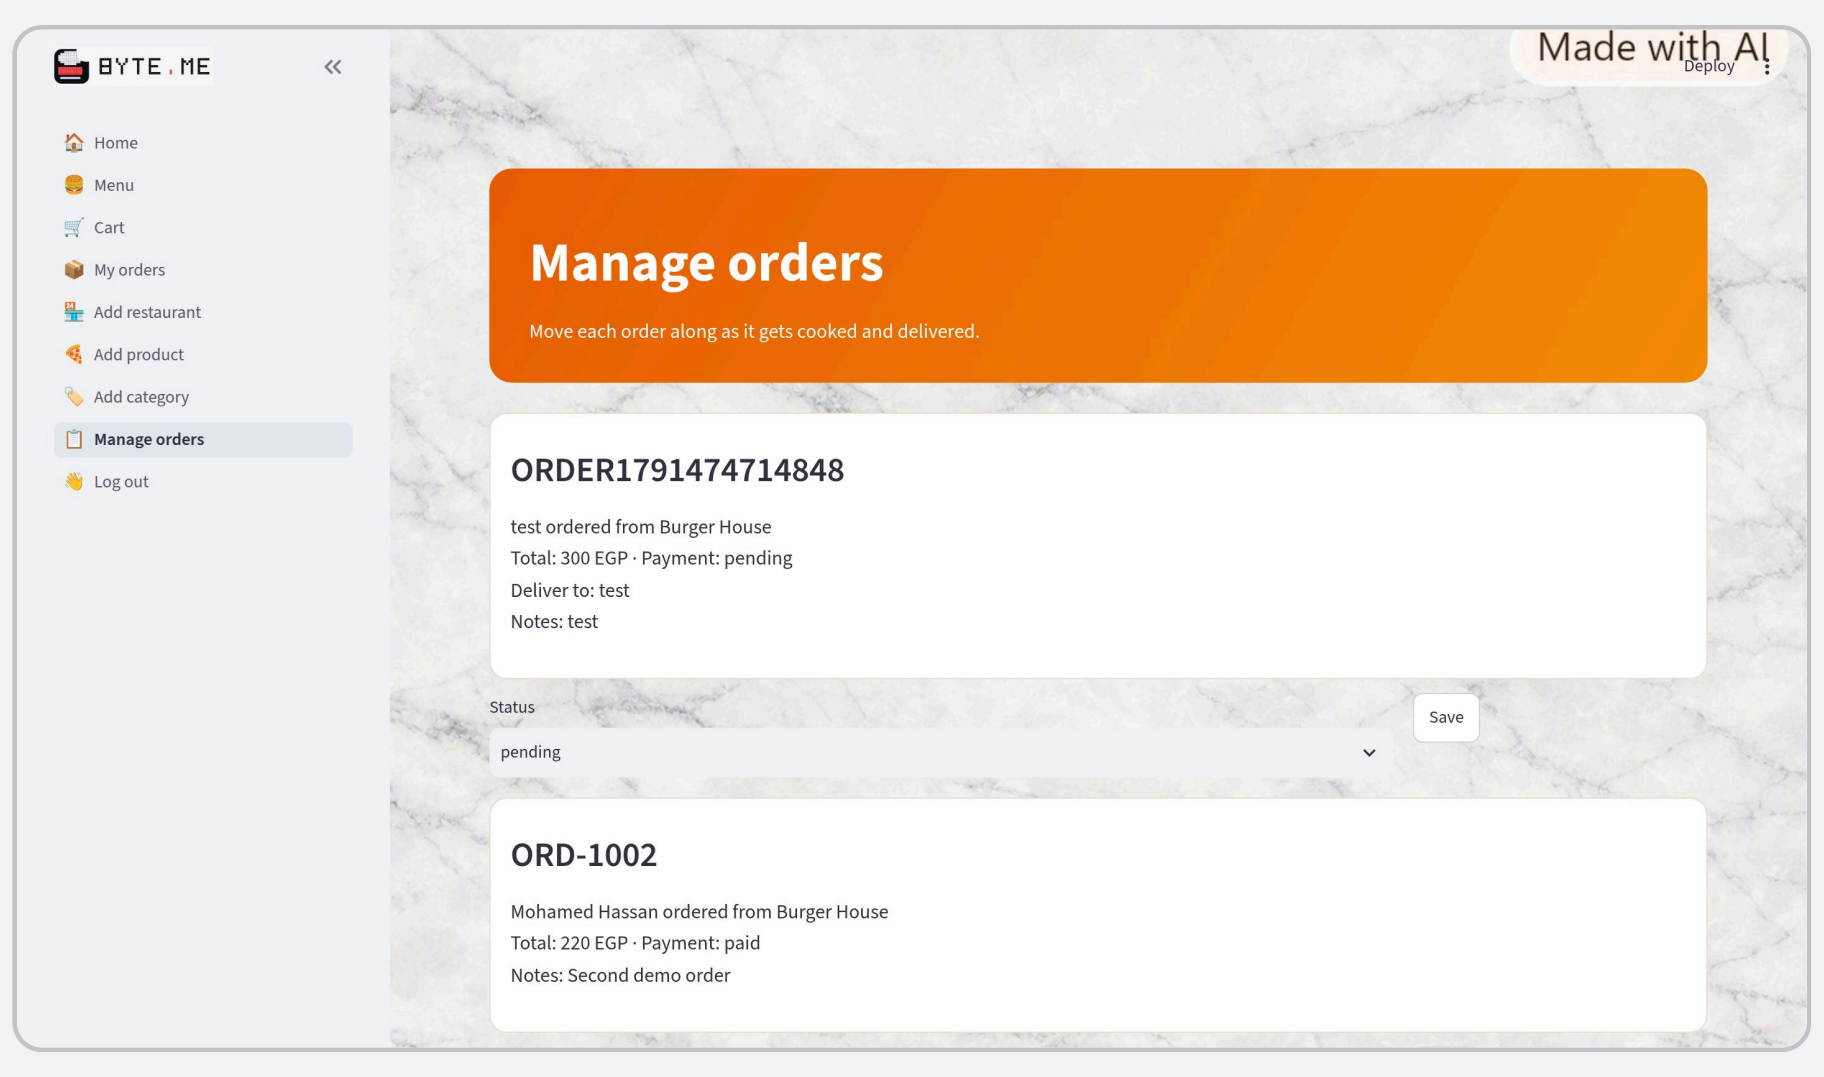
- **Find a restaurant**
  Search by name or pick a food type.
- **Menus with photos**
  Every dish shows its price, rating and calories.
- **A smart cart**
  ➖ / ➕ stop at the stock. One restaurant per order, because one driver brings it.
- **Checkout in one page**
  City, address, phone, delivery notes, and how to pay.
- **Track your order**
  “My orders” shows each order’s status and total.
- **Tools for owners**
  Add restaurants, dishes and categories, and move orders from pending to completed.



Home: every restaurant, with search.



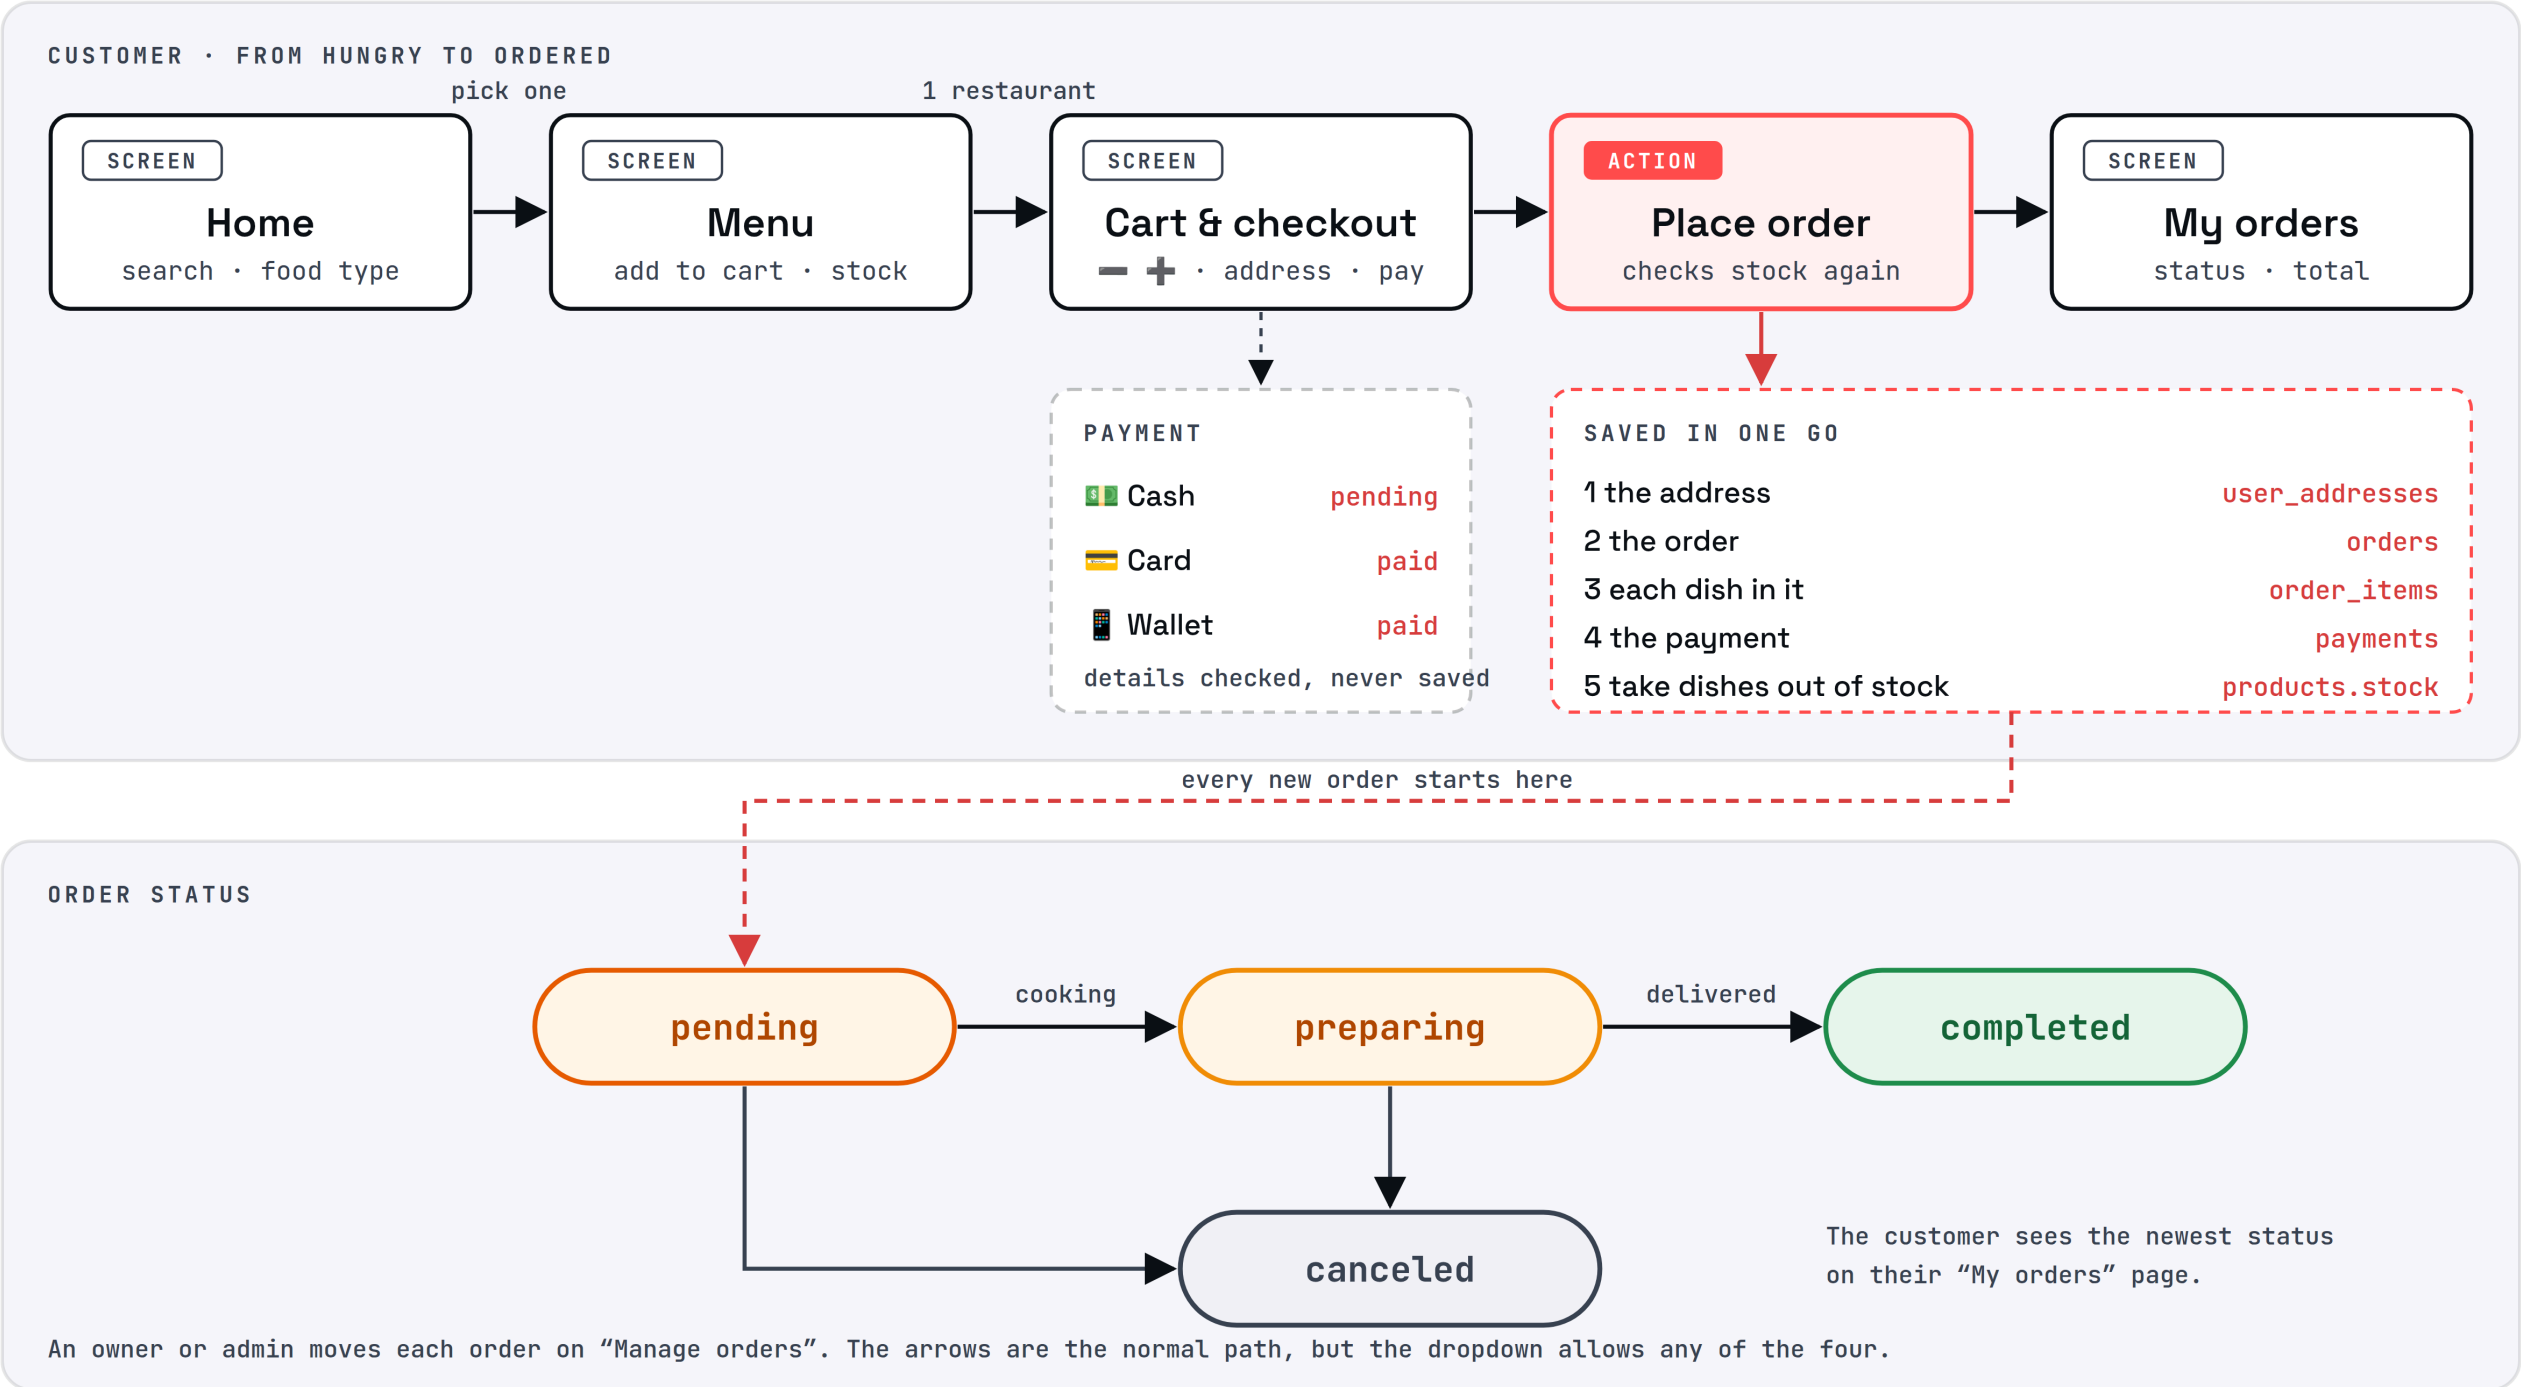
Menu: dishes with photos and ratings.



Manage orders: for owners and admins.

03 · HOW Plain Python, plain SQL. بايثون و SQL ببساطة

HOW AN ORDER MOVES



CUSTOMER · FROM HUNGRY TO ORDERED

SCREEN **Home** — search · food type → (pick one) → SCREEN **Menu** — add to cart · stock → (1 restaurant) → SCREEN **Cart & checkout** — ➖ ➕ · address · pay → ACTION **Place order** — checks stock again → SCREEN **My orders** — status · total

PAYMENT

💵 Cash	pending
💳 Card	paid
📱 Wallet	paid

details checked, never saved

SAVED IN ONE GO

1 the address	user_addresses
2 the order	orders
3 each dish in it	order_items
4 the payment	payments
5 take dishes out of stock	products.stock

every new order starts here

ORDER STATUS

pending → (cooking) → preparing → (delivered) → completed

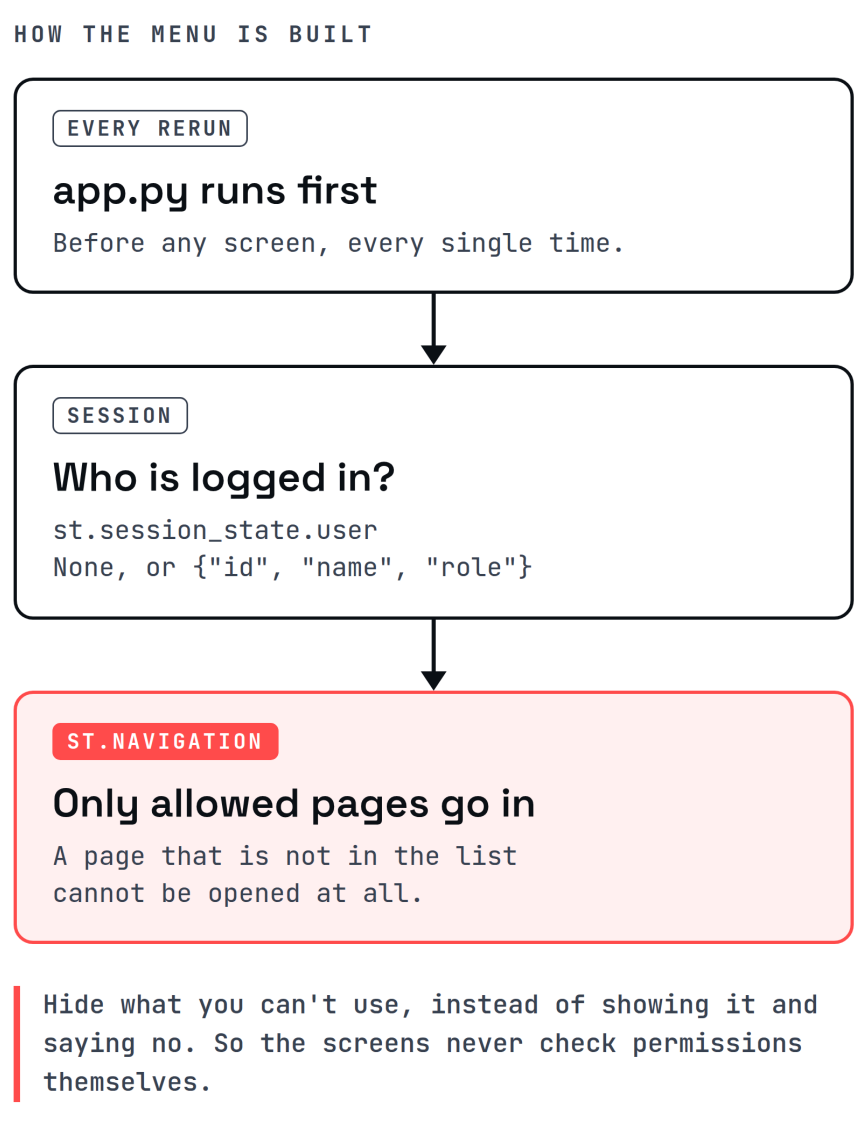
pending → canceled; preparing → canceled

The customer sees the newest status on their “My orders” page.

An owner or admin moves each order on “Manage orders”. The arrows are the normal path, but the dropdown allows any of the four.

WHO SEES WHICH PAGE

HOW THE MENU IS BUILT



EVERY RERUN
app.py runs first
Before any screen, every single time.

SESSION
Who is logged in?
`st.session_state.user`
`None, or {"id", "name", "role"}`

ST.NAVIGATION
Only allowed pages go in
A page that is not in the list cannot be opened at all.

> Hide what you can't use, instead of showing it and saying no. So the screens never check permissions themselves.
