Eyad Store: Your Tech, One Click Away

Project documentation for the Afro-Asian Forum for Innovation and Technology (AFFIAT), Aswan Finals 2026.

TECHNOFuture
KAFR EL SHEIKH

> Every number in this document was checked against the code in `STORE/` (`html.htm`, `html2.htm`, `html3.htm`, `html4.htm`, `css.css`, `js.js`). If you change the shop, update this file and run `python docs/build.py` to rebuild the PDF, the poster, the slides and the diagrams.

1. Project Overview | نظرة عامة على المشروع

Field	Value
Project Title	Eyad Store: Your Tech, One Click Away
Project Type	Static website (HTML, CSS and JavaScript, no server)
Description	Eyad Store is an online electronics shop. It shows 24 products in 5 groups: computers, peripherals, accessories, cameras and phones. Shoppers can filter, search and sort them, save favourites, fill a cart and check out. The cart and favourites are kept in the browser.
Target Users	Gamers, students looking for a laptop or tablet, people who take photos or stream, and anyone buying a tech gift.
Student	Eyad
Source code	The `STORE/` folder (not on GitHub yet)

Tech Stack | التقنيات المستخدمة

Category	Technology	Purpose
Pages	HTML5	4 pages: Home, Favourites, Cart and Checkout
Look	CSS3 (`css.css`)	Product cards, buttons, colours and a layout for phones
Actions	JavaScript (`js.js`)	The 24 products, search, sort, cart, favourites and the checkout total
Saving	Browser `localStorage`	Keeps the cart and favourites after a reload

Dependencies | المكتبات

No libraries or frameworks. The only extra is Font Awesome 7.0.1, for the 3 social icons in the footer. The Aswan Kit copy includes it, so the icons also work without internet.

2. Problem Statement | المشكلة

Buying electronics can be confusing. To compare a laptop, a headset or a camera, shoppers jump between many shops and pages to check prices, specs and reviews. After a while it is hard to remember which product they liked, and many shops ask for an account and a long form before you can order.

Why does it matter? | لماذا هذا مهم؟

Electronics cost a lot, from EGP 900 for a mouse to EGP 50,000 for a gaming PC in this shop. A wrong choice wastes money. A clear price, a short spec and a star rating next to each product help a shopper choose well and quickly.

How is it currently solved? | كيف تُحل المشكلة حاليًا؟

Today people use big marketplace apps, shop websites, or ask in social media groups. Big marketplaces show thousands of results and many ads, small shops often have no website, and social media posts rarely show a clear price. Eyad Store keeps it small and clear: a short list in 5 groups, with price, rating and spec on every card, and a 4-box checkout.

3. Technical Architecture | البنية التقنية

Project Structure | هيكل المشروع

```
store eyad aswan/
├── STORE/
│   ├── html.htm      # Home: groups, sort and all products
│   ├── html2.htm     # Favourites
│   ├── html3.htm     # Cart
│   ├── html4.htm     # Checkout
│   ├── css.css       # The look
│   ├── js.js         # The products and every button's action
│   └── images/       # Product pictures
└── docs/             # Documentation, poster, slides
```

How it works | كيف يعمل

There is no server and no database. The 24 products are written in `js.js`. Each page loads the same `js.js`, which draws the products for that page. When the shopper adds a product to the cart or taps the heart, its name is saved in the browser (`localStorage`), so the cart and favourites are still there after a reload.

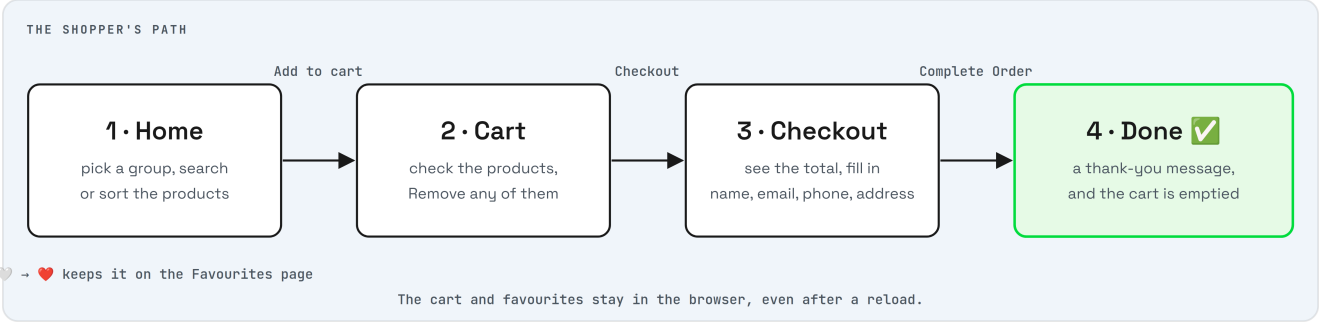

4. Features & User Flow | المميزات ورحلة المستخدم

Feature List | قائمة المميزات

#	Feature	Description	Status
1	Product cards	Picture, name, price in EGP, star rating with its number, a short spec, "Add to cart" and a heart.	Complete
2	Product groups	Six buttons: All Products, Computers (5), Peripherals (6), Accessories (6), Cameras (6) and Phones (1).	Complete. The button labels are hard to read until the mouse is over them.
3	Search	Searches each product's name and description as you type. "wireless" finds 4 products.	Complete. It does not combine with the group buttons.
4	Sort by	Default, Price: Low to High, Price: High to Low, Name A-Z, Highest Rated.	Complete
5	Favourites	The heart turns 🤍 to ❤️ and the product shows on the Favourites page. An empty list shows "Your favorites list is empty" and a Go Shopping button.	Complete
6	Cart	"Add to cart" shows a green "Added to cart! 🛒" message. A red badge on the Cart button counts the items. The Cart page has Remove for each one and a Checkout button.	Complete. One of each product, no quantity.

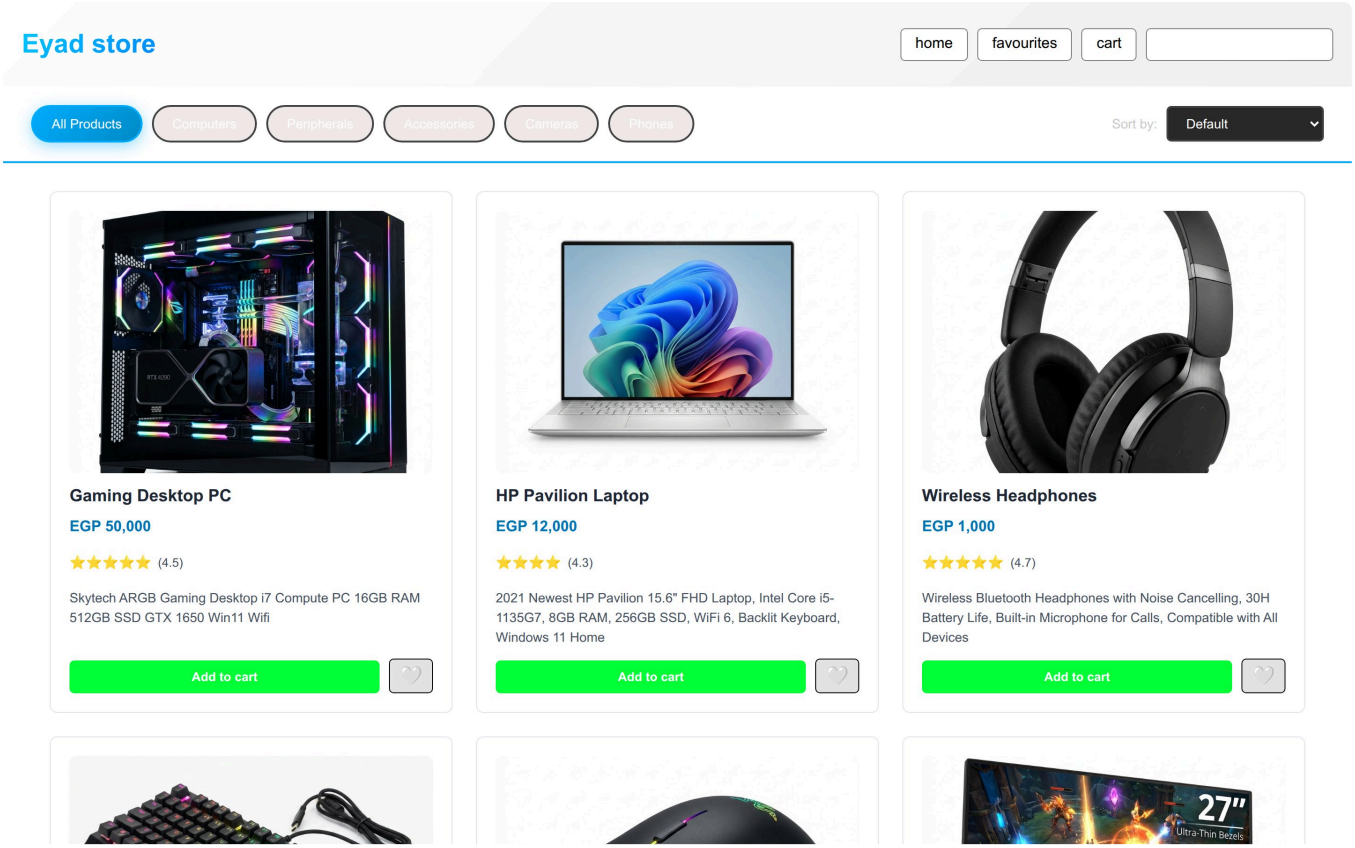

#	Feature	Description	Status
7	Checkout	The Order Summary lists the cart and adds up the total. The form asks for Full Name, Email, Phone Number and Delivery Address, all required.	Demo only. The order is not sent anywhere.
8	Order message	Complete Order hides the form, shows ✅ and a thank-you message, and empties the cart.	Complete. The message is in Arabic.
9	Picture zoom	Clicking a product picture on Home shows it big on a dark screen. Click outside or × to close.	Complete
10	Phone layout	Under 768 px the menu bar, group buttons and Sort by stack in a column. Under 500 px the checkout boxes stack too.	Complete

User Flow | رحلة المستخدم

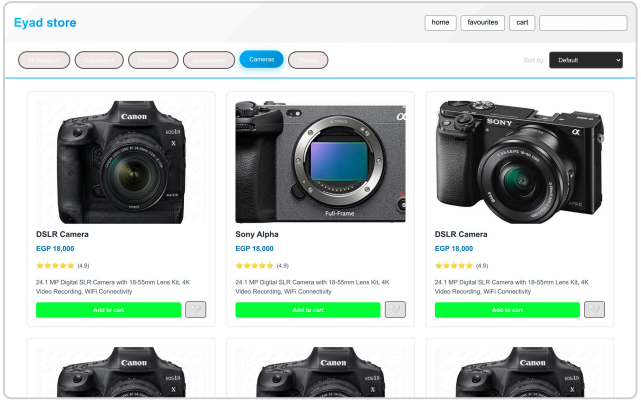

5. UI/UX Design | تصميم واجهة المستخدم

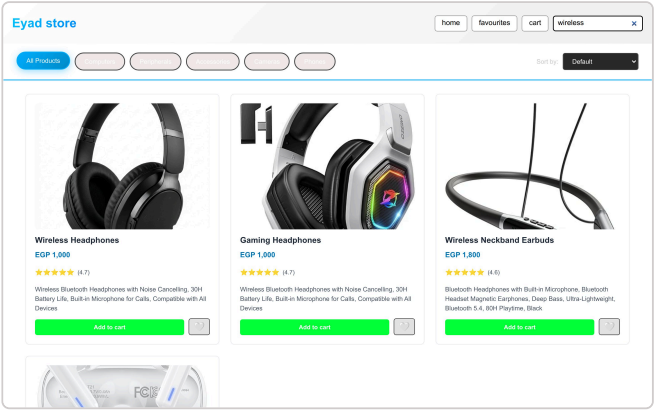

Screenshots | لقطات الشاشة

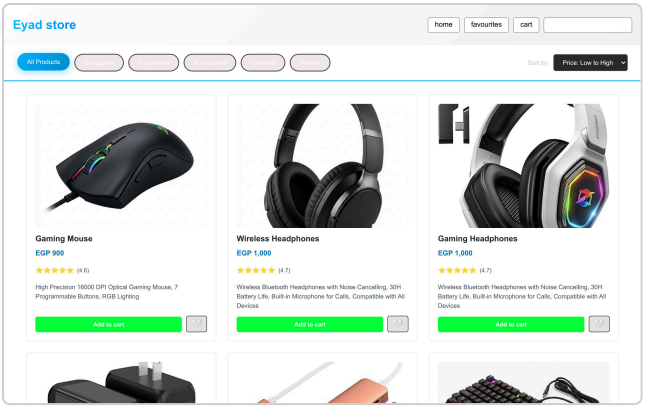

Cameras group

Search "wireless"

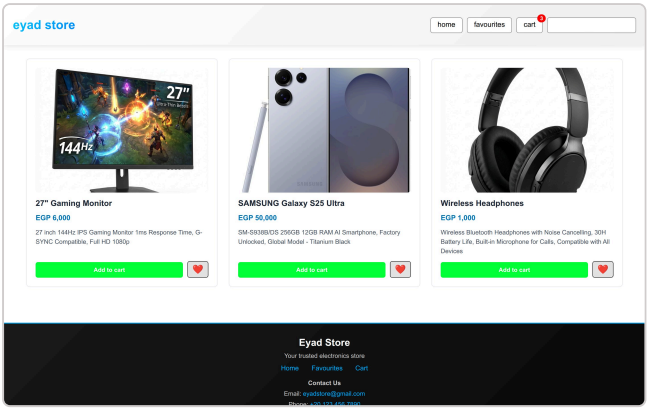

Sorted by price

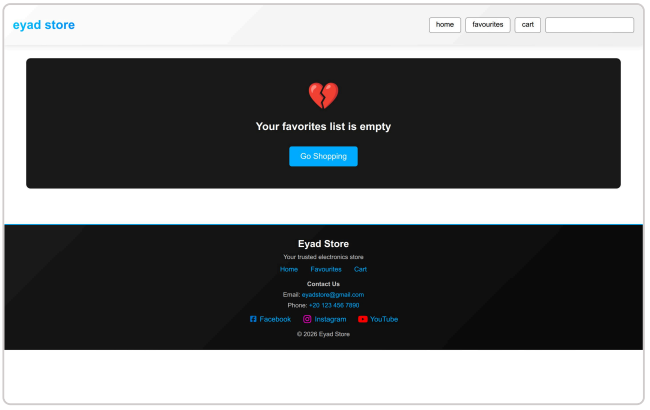

Picture zoom

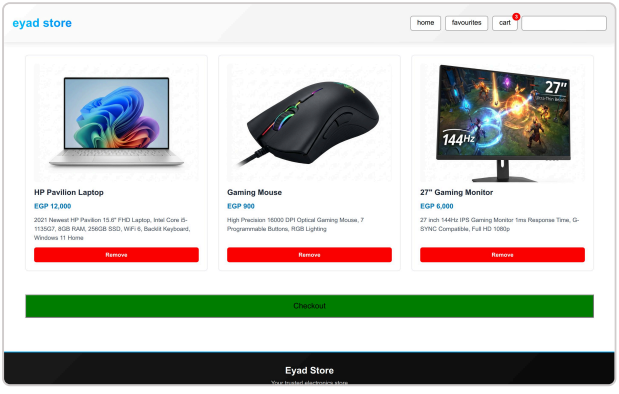

Favourites

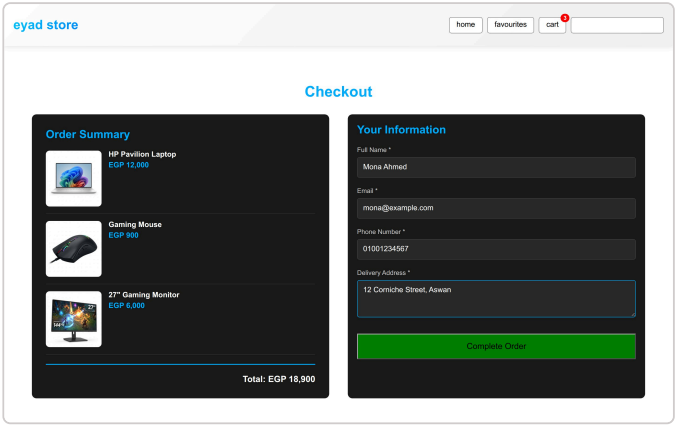

Empty favourites

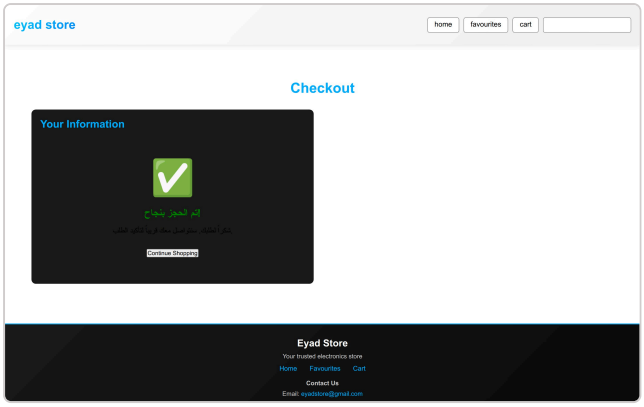

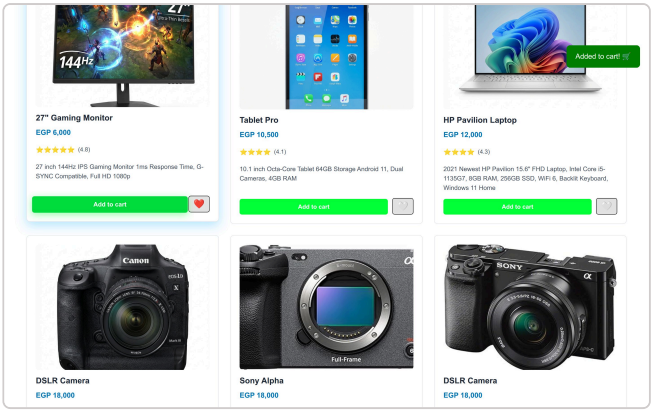

Cart

Checkout

Order done	Added to the cart
	

Design System | نظام التصميم

Element	Current implementation
Logo	”Eyad store” in bold sky blue. The poster and slides add a blue shopping-bag mark.
Colours	Sky blue for the title and active buttons, green for ”Add to cart”, red for Remove, and dark grey for checkout and the footer
Font	Arial
Cards	White and rounded, with a blue glow when the mouse is over them

6. Data Sources | مصادر البيانات

Products | المنتجات

Eyad wrote the 24 products in `js.js`, each with a picture, name, price, short description, group and star rating. Prices go from EGP 900 to EGP 50,000.

Group	Count	Products
Computers	5	Gaming Desktop PC, HP Pavilion Laptop, Tablet Pro, ASUS ROG Strix G16 Gaming Laptop, PS5
Peripherals	6	Mechanical Keyboard, Gaming Mouse, 27" Gaming Monitor, Webcam, M2 SSD 2TB, USB-C Hub 7-in-1
Accessories	6	Wireless Headphones, Smart Watch, USB C Wall Charger Block, Wireless Neckband Earbuds, Gaming Headphones, Wireless Earbuds
Cameras	6	DSLR Camera (4 cards), Sony Alpha, "DLSR Camera"
Phones	1	SAMSUNG Galaxy S25 Ultra

The checkout form (name, email, phone, address) is checked by the browser and then not saved anywhere. The shop uses no outside services.

Limits | حدود المشروع

These are the shortcuts and gaps in the current version. `PROBLEMS.md` lists each one with its file and line.

- Orders are a demo. Complete Order shows a message, but the order is not sent to anyone and no money is taken.
- A product can be in the cart only once, and there is no quantity.
- Some product data is wrong: the PS5 has a camera's description, the same DSLR camera appears 4 times, and a webcam is named "DLSR Camera".
- A 4.5 rating shows 5 full stars.
- The category button labels are white on light grey and hard to read.
- The checkout total starts as `$0.00` for a moment, and the thank-you message is in Arabic while the rest is in English.
- Search and the group buttons do not combine.
- Without internet, the footer's social icons are blank (the Aswan Kit copy bundles them).

7. Educational Content | المحتوى التعليمي

Learning Objectives | أهداف التعلم

Through building this project, a student can practice:

1. Building several HTML pages that share one menu, one stylesheet and one script.
2. Storing data in a JavaScript object and drawing it on the page with a loop.
3. Filtering, searching and sorting a list of products.
4. Saving lists in `localStorage` so the cart and favourites survive a reload.
5. Turning a price written as text (”EGP 12,000”) into a number to add up a total.

Cultural / Historical Context | السياق الثقافي

Topic	Description
Online shopping in Egypt	More and more people in Egypt buy phones, laptops and accessories online. Prices are shown in Egyptian pounds (EGP), as on this shop.
Shops named after people	Many shops in Egypt carry their owner’s name. Eyad Store follows that habit with the student’s own name.
Shopping carts	The ”cart” idea comes from the supermarket trolley. Websites copied it so shoppers can collect items before paying.

Curriculum Alignment | الارتباط بالمنهج

Skill Area	What the Student Practices
Problem Solving	Making it quick to find, compare and order a tech product.
Computational Thinking	Splitting the shop into pages (HTML), look (`css.css`) and actions (`js.js`).
Mathematics	Adding up prices, and rounding ratings into stars.
Creativity	Designing a clean shop look with cards, colours and a picture zoom.
Technical Writing	Writing a short, clear spec for each of the 24 products.

8. Marketing Plan | خطة تسويقية

Target Audience | الجمهور المستهدف

- **Primary:** teens and young adults aged 13 to 25 who love games and gadgets.
- **Secondary:** university students buying a laptop or tablet, and families looking for a tech gift.

Platforms | المنصات

- Phone and laptop browsers. The shop works on both and needs no install.
- Short product videos on Instagram, TikTok and YouTube, which the footer already links to, plus posters at schools and youth events.

9. Student Worksheet | ورقة عمل الطالب

My Project Information | معلومات مشروعي

Student Name: Eyad
Project Title: Eyad Store: Your Tech, One Click Away

What is your project about? | عن ماذا يتحدث مشروعك؟

Eyad Store is an online electronics shop with 24 products in 5 groups. You can filter, search and sort them, save favourites, fill a cart and check out.

What problem does it solve? | ما المشكلة التي يحلها؟

It makes buying tech simpler: every product shows its price, rating and spec, you can save what you like, and the checkout has only 4 boxes.

My Data | بياناتي

Where does data come from?

I wrote the 24 products in `js.js` and picked a picture for each one. Shoppers type their details into the checkout form.

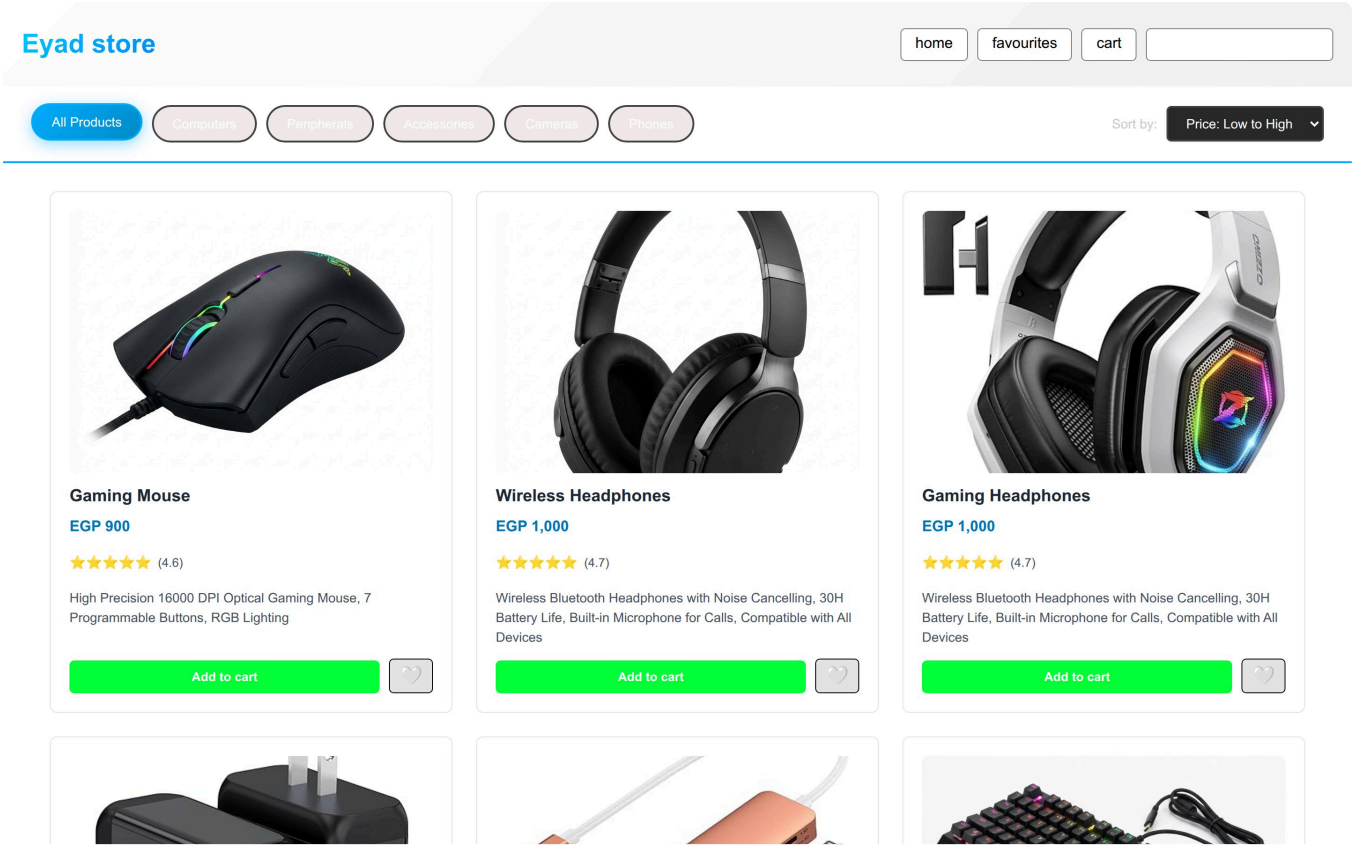

What data is stored?

The products are stored in the code. The cart and favourites are saved as lists of product keys in the shopper's own browser. The checkout details are not saved.

What I Learned | ماذا تعلمت

1. **The hardest part:** making the same `js.js` work on all 4 pages, by reading the page title to know which page is open.
2. **The most fun part:** seeing the cart badge count up and the ✅ message appear after the first order.
3. **If I had more time:** I would add quantities to the cart, fix the product list and send real orders to a server.
4. **One thing I would do differently:** give the pages clear names like `index.html` and `cart.html` from the start.
