Legion: Health-tech website

Project documentation for the Legion website, for the Afro-Asian Forum for Innovation and Technology (AFFIAT), Aswan Finals 2026. By Omar Mofreh (Malek).

1. Project Overview | نظرة عامة على المشروع

Field	Value
Project Title	Legion: Health-tech website
Project Type	Static website (no database, no server code)
Description	Legion is a website for a made-up health-tech company. Visitors can read about the platform, try a demo of the AI care agent chat, send a message to the team, and open sign-in and register forms.
Target Users	Patients who want a clear view of their health data, and the clinicians and care teams who look after them.
Live site	https://omar-mofreh.github.io/legion/

Tech Stack | التقنيات المستخدمة

Category	Technology	Purpose
Structure	HTML	Six pages, each in its own `.html` file
Styling	CSS	One file, `styles.css`, with the colours set once on `:root`
Behaviour	JavaScript	One file, `script.js`: the phone menu, the Show/Hide password button and the demo form messages
Fonts	Google Fonts	DM Sans and Space Grotesk, loaded by a link in each page

Dependencies | المكتبات

There is nothing to install. The site uses no framework and no package manager. The only outside file is the Google Fonts stylesheet.

2. Problem Statement | المشكلة

Health data is scattered across devices and records, so patients cannot see the whole picture and clinicians start visits without context. Legion shows one connected picture.

Why does it matter? | لماذا هذا مهم؟

Patients are left to explain symptoms from memory, and care teams miss trends that could help them act sooner.

How is it currently solved? | كيف تُحل المشكلة حاليًا؟

People use separate apps, wearables and paper records. Each one shows only a piece, and none of them prepares a short summary for the clinician.

3. Technical Architecture | البنية التقنية

Project Structure | هيكل المشروع

```
legion/
├── index.html        # Home: hero, health dashboard card, feature cards, steps, contact
form
├── platform.html     # Platform: three feature cards, workflow, care network numbers
├── ai-agent.html     # AI care agent: a chat demo
├── contact.html      # Contact form
├── login.html        # Sign-in form
├── register.html     # Create-account form
├── styles.css        # All the styling
├── script.js         # All the behaviour, shared by every page
├── assets/logo.png   # The logo
└── docs/             # This documentation, the poster, the slides and the diagrams
```

How it works | كيف يعمل

Every page loads `styles.css` and `script.js`. Each page has its own copy of the header and the footer, on purpose, so every file can be read on its own. `script.js` looks for a form by its id. If the page has no such form, it does nothing.

HOW EVERY PAGE IS BUILT

HTML
One .html file per page
Its own copy of the header
and the footer.

↓

STYLES
styles.css
Colours are set once on :root.
One block for each part of a page.

↓

SCRIPT.JS
Looks for its own form
No form on the page?
Then it does nothing there.

Copying the header and footer is on purpose: every file can be read from top to bottom on its own.

WHICH PAGE HAS WHICH PART

Page	Menu header with links	Form	Message appears in
MARKETING PAGES			
🏠 Home	✓	contact form	#form-status
🧩 Platform	✓	—	—
💬 AI agent	✓	chat form	#chat-status
✉️ Contact	✓	contact form	#form-status
ACCOUNT PAGES · SHORT HEADER			
🔐 Sign in	—	login form + Show/Hide	#login-status
📝 Register	—	register form	#register-status

Sign in and Register have a short header (logo and two buttons), so they have no phone menu. 6 pages, 4 demo forms, 1 shared script.

Key Files | الملفات الأساسية

File	Purpose
`index.html`	The home page, with the live-health-snapshot card, three feature cards, the three steps and a contact form.
`styles.css`	All the colours, layout and the two phone/tablet rules at the end (850px and 620px).
`script.js`	The phone menu, the Show/Hide password button, and the message each demo form shows when you send it.

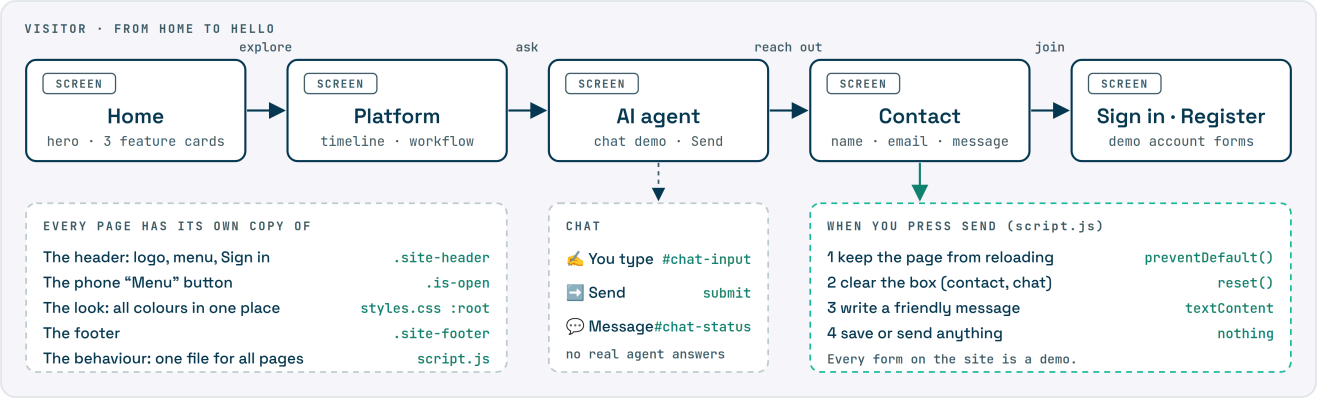

4. Features & User Flow | المميزات ورحلة المستخدم

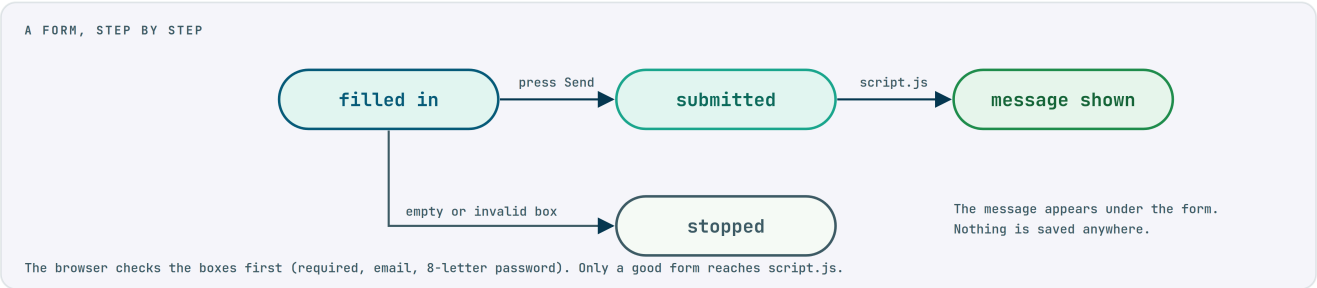

Feature List | قائمة المميزات

#	Feature	Description	Status
1	Home page	Headline, a health dashboard card (pulse, oxygen, steps, sleep), three feature cards and three steps.	Complete
2	Platform page	A timeline, a calm workflow and care-network numbers.	Complete

#	Feature	Description	Status
3	AI care agent	A chat panel. Typing a message shows a "message received" note.	Demo only
4	Contact form	Name, email and message, with a thank-you note.	Demo only
5	Sign in and Register	Forms with a Show/Hide password button.	Demo only
6	Phone menu	A "Menu" button opens the links on small screens.	Complete

User Flow | رحلة المستخدم

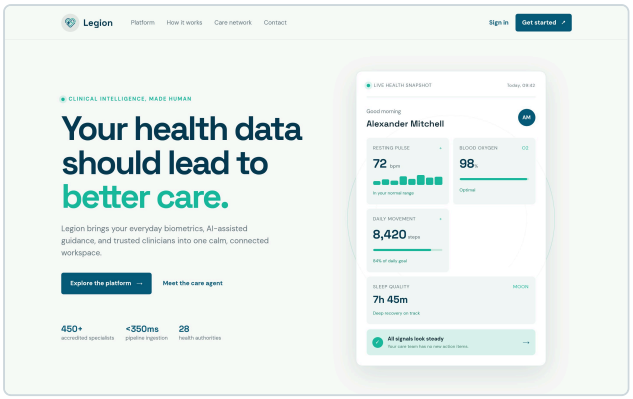

Screen Reference | الشاشات

Screen	File	Description
Home	`index.html`	The first page: what Legion is, with a sample dashboard.
Platform	`platform.html`	What the platform does and who is in the care network.
AI agent	`ai-agent.html`	A chat demo with a short explanation of what the agent does.
Contact	`contact.html`	The contact form and the email and phone.
Sign in	`login.html`	Email and password form.
Register	`register.html`	First name, last name, email, password and a terms checkbox.

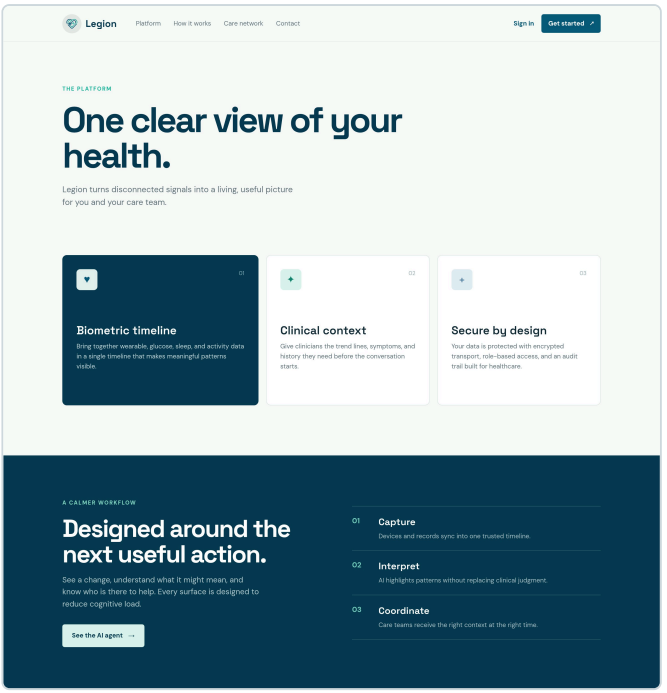

5. UI/UX Design | تصميم واجهة المستخدم

Design System | نظام التصميم

Element	Current implementation
Logo	A heart made of lines, with a plus sign and a heartbeat, in deep blue and teal (`assets/logo.png`).
Main colour	Deep blue `#075A78` for buttons, and `#063B51` for the dark sections
Accent colour	Mint `#19B99D` for small labels and highlights
Background	Soft cream `#F7FAF7`
Fonts	Space Grotesk for headlines, DM Sans for text
Layout	Content is at most 1180px wide. Cards sit in a grid that becomes one column on a phone.

6. Data Sources | مصادر البيانات

There is no database and no outside data. The numbers on the dashboard card and the care-network numbers are examples written straight into the HTML. The forms do not save or send anything.

External APIs | الخدمات الخارجية

None. The site only loads two Google Fonts.

Limits | حدود المشروع

These shortcuts were taken on purpose to keep the code simple. The full list is in the README.

- The forms are pretend. They save nothing and send nothing.
- The AI care agent is not real. The chat only shows a ”message received” note.
- The health numbers and the patient name are made-up examples.
- No passwords are checked, because there are no accounts.
- The header and footer are copied into each page, so a change means editing six files.

7. Educational Content | المحتوى التعليمي

Learning Objectives | أهداف التعلم

Through building this project, a student can practice:

1. Writing a page with clear sections: header, main content and footer.
2. Using grids, one set of colour variables and two @media rules so the site fits tablets and phones.
3. Using one small script that looks for a form by its id and shows a friendly message.
4. Turning the menu into a Menu button on small screens.
5. Keeping code simple enough that every file can be read on its own.

Curriculum Alignment | الارتباط بالمنهج

Skill Area	What the Student Practices
Problem Solving	Finding a simple way to show a health platform without a backend.
Computational Thinking	Breaking the site into pages, shared styles and one shared script.
Creativity	Designing a calm look and a sample health dashboard from the logo’s colours.
Collaboration	Built by Omar Mofreh with the Malek team.
Technical Writing	Writing the README, its Limits section and this documentation.

8. Marketing Plan | خطة تسويقية

- **Primary audience:** Patients who track their own health.
- **Secondary audience:** Clinicians, hospitals and clinics that want connected care.
- **Where people will use it:** Phone and desktop browsers.
- **Where it is shared:** The live site on GitHub Pages, with the QR code on the poster and slides.

9. Student Worksheet | ورقة عمل الطالب

Student Name: Omar Mofreh
Project Title: Legion: Health-tech website

What is your project about? | عن ماذا يتحدث مشروعك؟

Legion is a website for a health-tech company. It shows how health signals, an AI care agent and care teams can work together.

What problem does it solve? | ما المشكلة التي يحلها؟

Health data is scattered, so patients and clinicians do not see one clear picture. The site shows how Legion would fix that.

What I Learned | ماذا تعلمت

1. **The hardest part:** Making the layout work on tablets and phones.
2. **The most fun part:** Building the sample health dashboard card.
3. **If I had more time:** Connect the forms to a real service.
