MEDICAL WEBSITE · EGYPT

MedMind

Your Health • Our Priority

Check on your health with an AI assistant, learn about diseases, and find and book a doctor or hospital, without leaving home.

01 · THE PROBLEM المشكلة

People get sick and don’t know what to do.

Is it serious?

People can’t tell whether their symptoms point to a disease, so they worry, or they wait too long.

Which doctor?

Even when they decide to go, they don’t know which specialty they need, and lose time and money.

Far from home

When they travel, they don’t know where the nearest doctor or hospital is.

WHO IT'S FOR لمن هذا التطبيق

For anyone who worries about their health.

01

Adults over 34

The main group: a regular health check, and a doctor they can book.

02

Adults 20–30

Quick answers about a symptom before deciding to see a doctor.

03

Parents with babies

Fast guidance on whether a child needs a doctor or a hospital, and which one.

04

Teens and young adults

Easy-to-read information about diseases and their symptoms.

OUR SOLUTION الحل

Check. Find. Book.

1

Check

Tick your symptoms. See which of 20 diseases match best, and read about each one.

→

2

Find

A doctor in one of 15 specialties, or one of 10 hospitals, with place and fee.

→

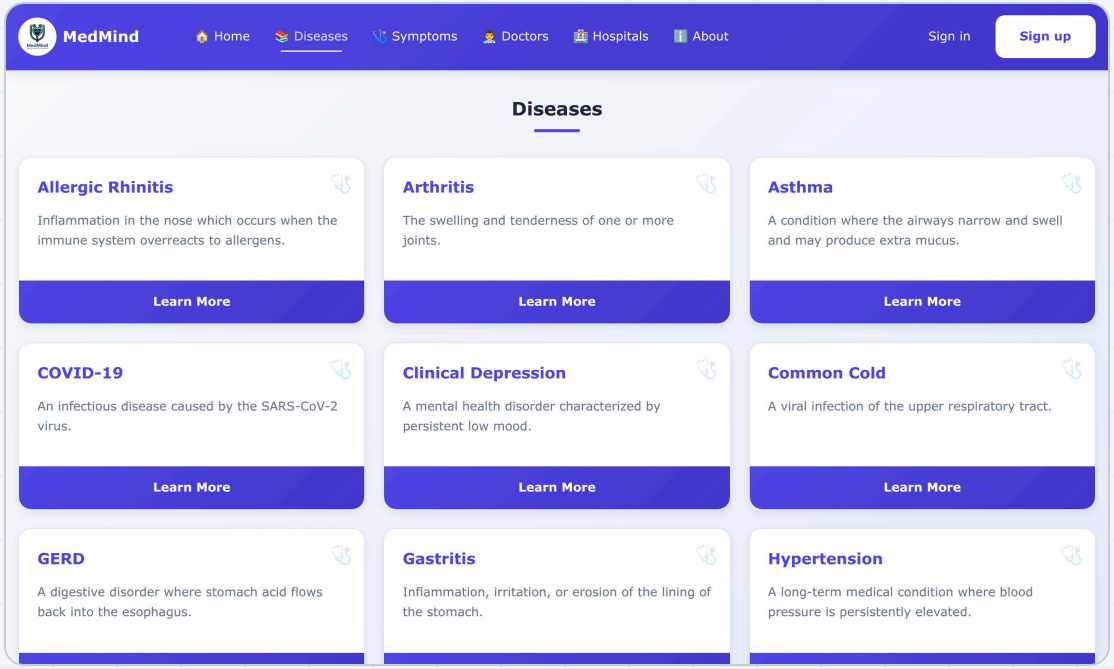

3

Book

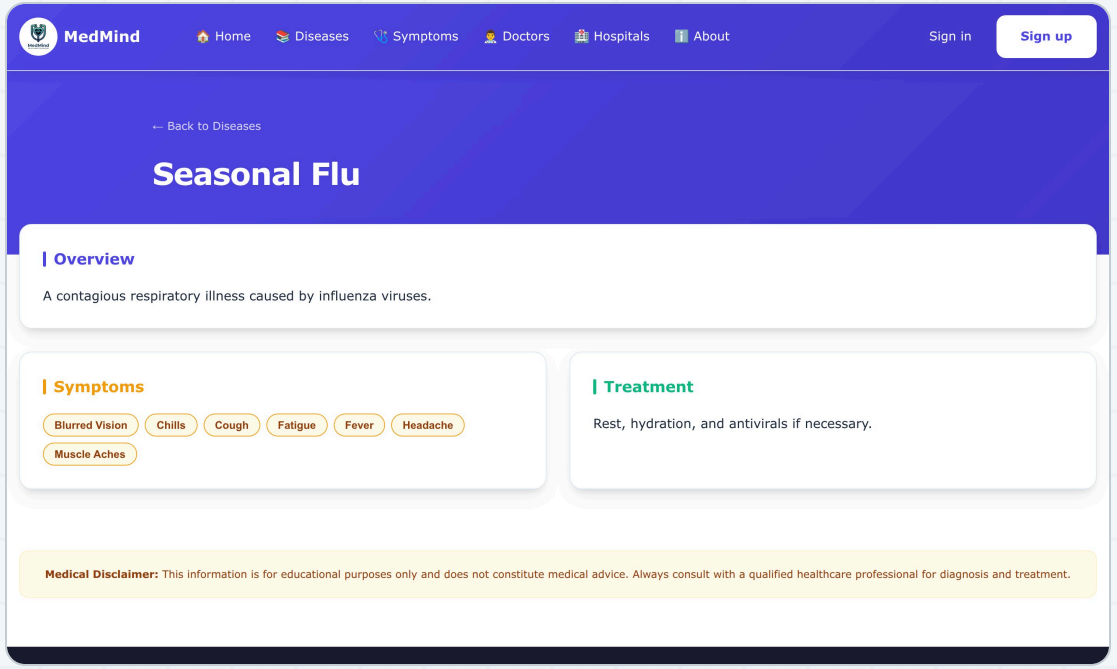

Pick a date and time. The doctor or hospital confirms it on their profile.

02 · DEMO عرض

Read about a disease.

Diseases: all 20, A to Z, each with a short overview. Anyone can browse.

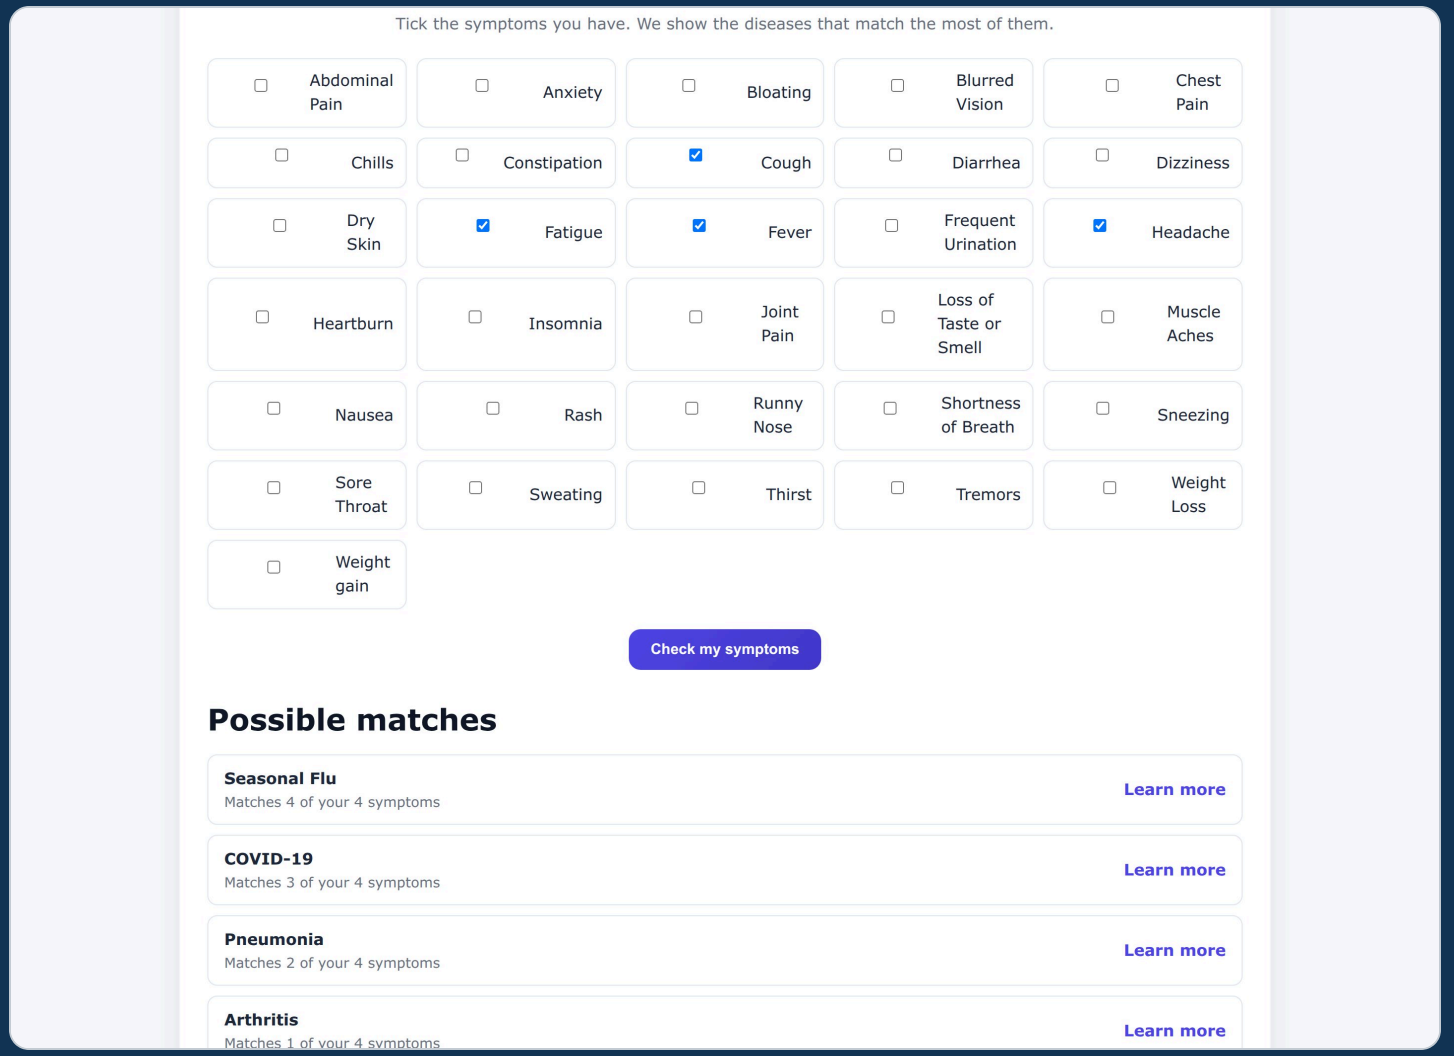

One disease: overview, treatment and its symptoms. Seasonal Flu has 7.

02 · DEMO عرض

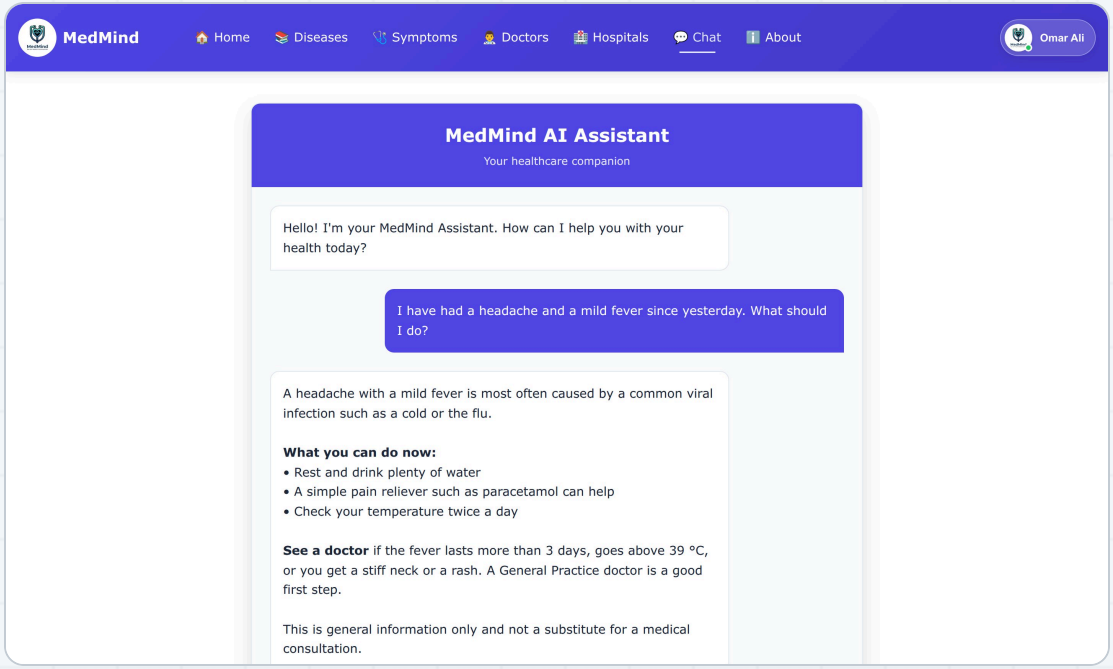

Check your symptoms.

- **Tick what you feel**
  Any of the 31 symptoms in the list.
- **See the best match first**
  Each disease shows how many of your symptoms it has.
- **Learn more**
  One click opens the disease page.
- **Ask the assistant**
  Signed in? One button sends your symptoms to the chat.

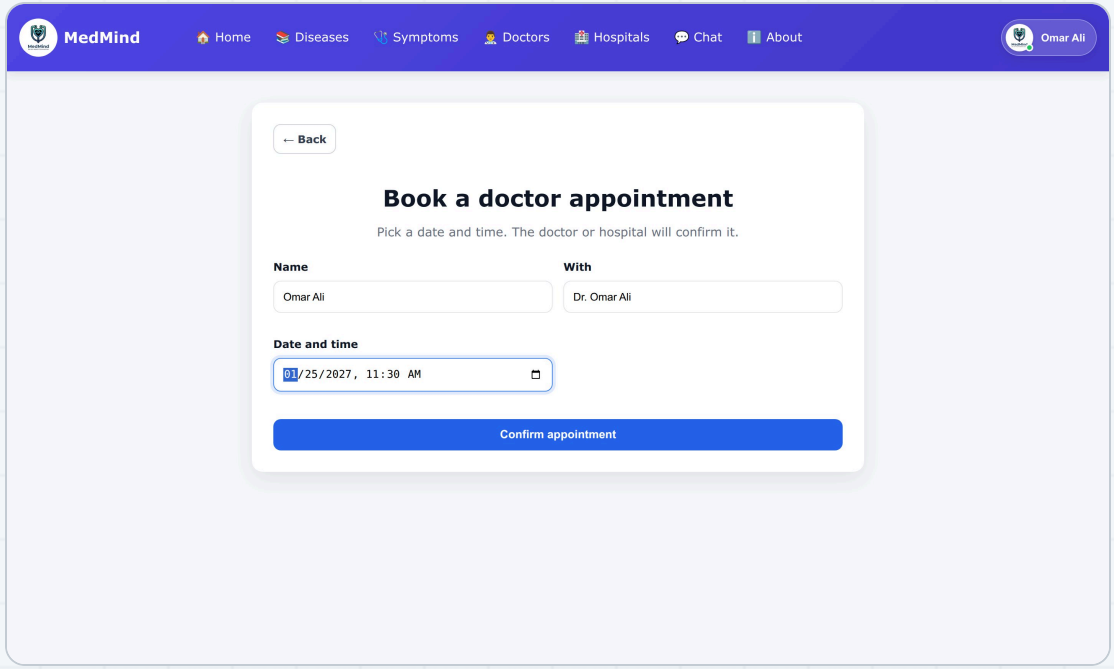

02 · DEMO عرض

Ask, then book.

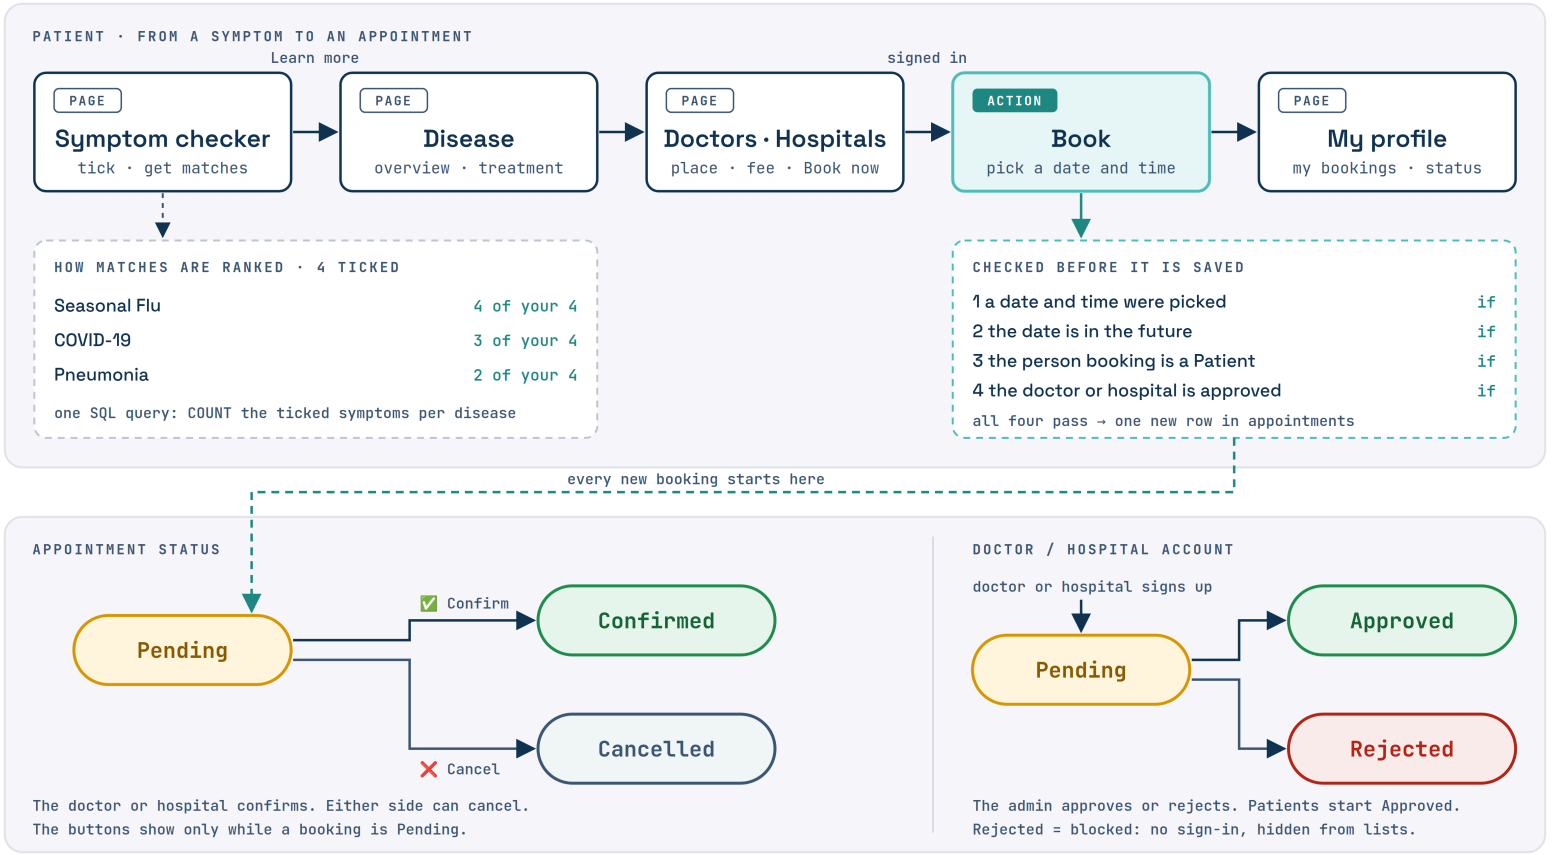

Chat: Gemini answers in plain words and says when to see a doctor.

Booking: a patient picks a date and time. It must be in the future.

Four checks, then one new row.

4 checks before a booking is saved

3 booking statuses: Pending, Confirmed, Cancelled

1 SQL query ranks the symptom matches

Built so a beginner can read every line.

HOW THE MENU IS BUILT

EVERY PAGE

loadHeader() runs first

components/Header/header.js
draws the same menu on every page.

LOCALSTORAGE

Who is signed in?

getCurrentUser()
null, or { ID, Name, Role, … }

HIDE, DON'T REFUSE

Only usable links show

Chat needs a sign-in. Book now shows for patients only (canBook).

> Chat, booking and profile start with requireSignIn(), which sends a visitor to the sign-in page. Booking also sends anyone who is not a patient back home.
