MEDICATION CARE · EGYPT

MedSync

Never miss a dose.

Doctors prescribe, patients get an alarm at dose time, and nurses mark every dose, so everyone can see who is on track.

01 · THE PROBLEM المشكلة

Medicine only works if you take it.

Doses are forgotten

A busy day and a long list of pills, and a dose slips by.

Nobody records them

On paper it is hard to tell which doses were given and which were missed.

Doctors find out late

Without a record, the doctor learns only at the next visit that the treatment wasn't followed.

WHO IT'S FOR لمن هذا التطبيق

Four people, one dose schedule.

01

Patients on daily medicines

A reminder at the right minute and a clear list of their medicines.

02

Nurses

Today's doses for each patient, marked in one tap.

03

Doctors

Proof that a prescription is being taken, as an adherence score.

04

Families and caregivers

Peace of mind about a parent's medicines. A family role is on our wish list.

OUR SOLUTION الحل

Prescribe. Remind. Mark.

1

Prescribe

The doctor picks one of 207 medicines, a dosage and a dose time.

→

2

Remind

At that minute the patient's page shows a banner, beeps and sends a notification.

→

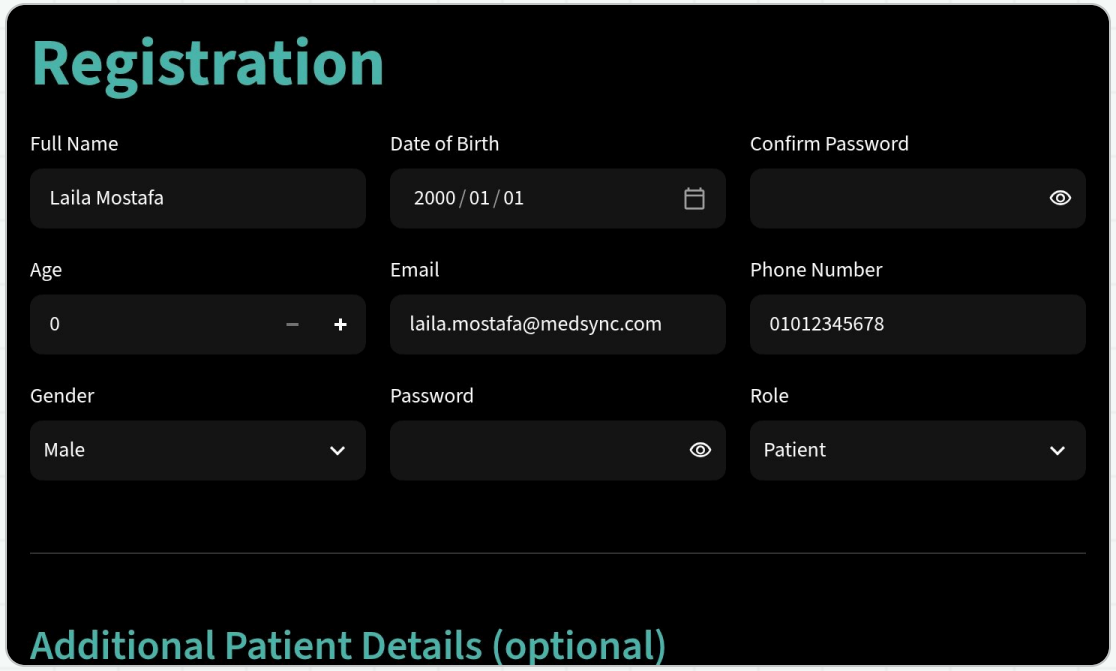

3

Mark

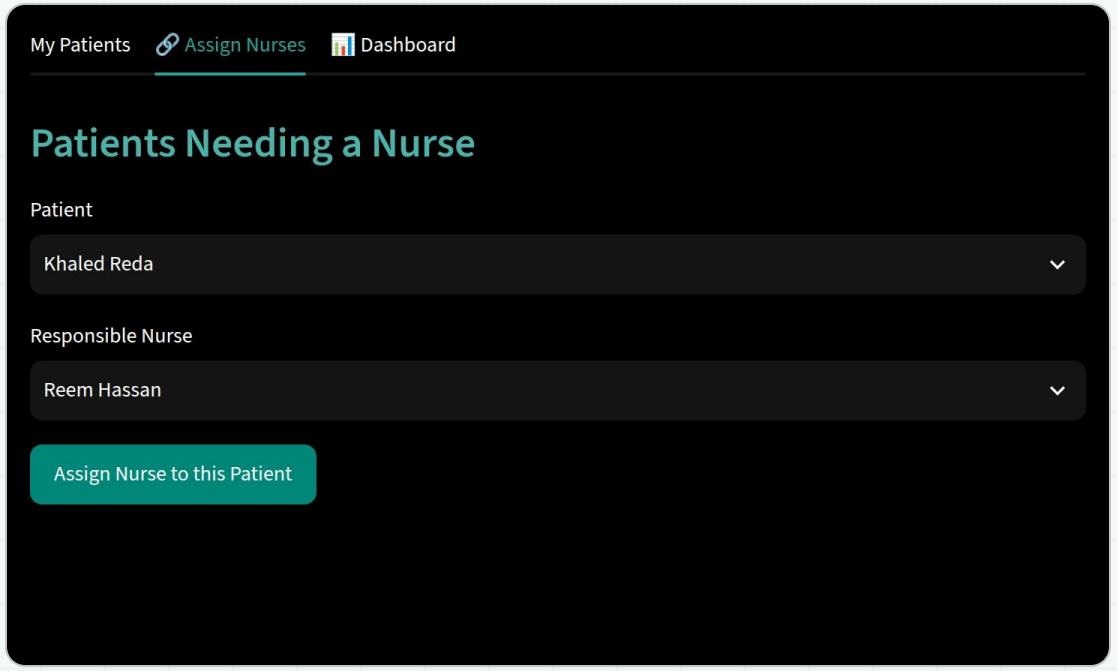

The nurse marks the dose given or missed, and the adherence score updates.

02 · DEMO عرض

Every patient gets a care team.

Registration: basic details for everyone, plus extra fields for the chosen role.

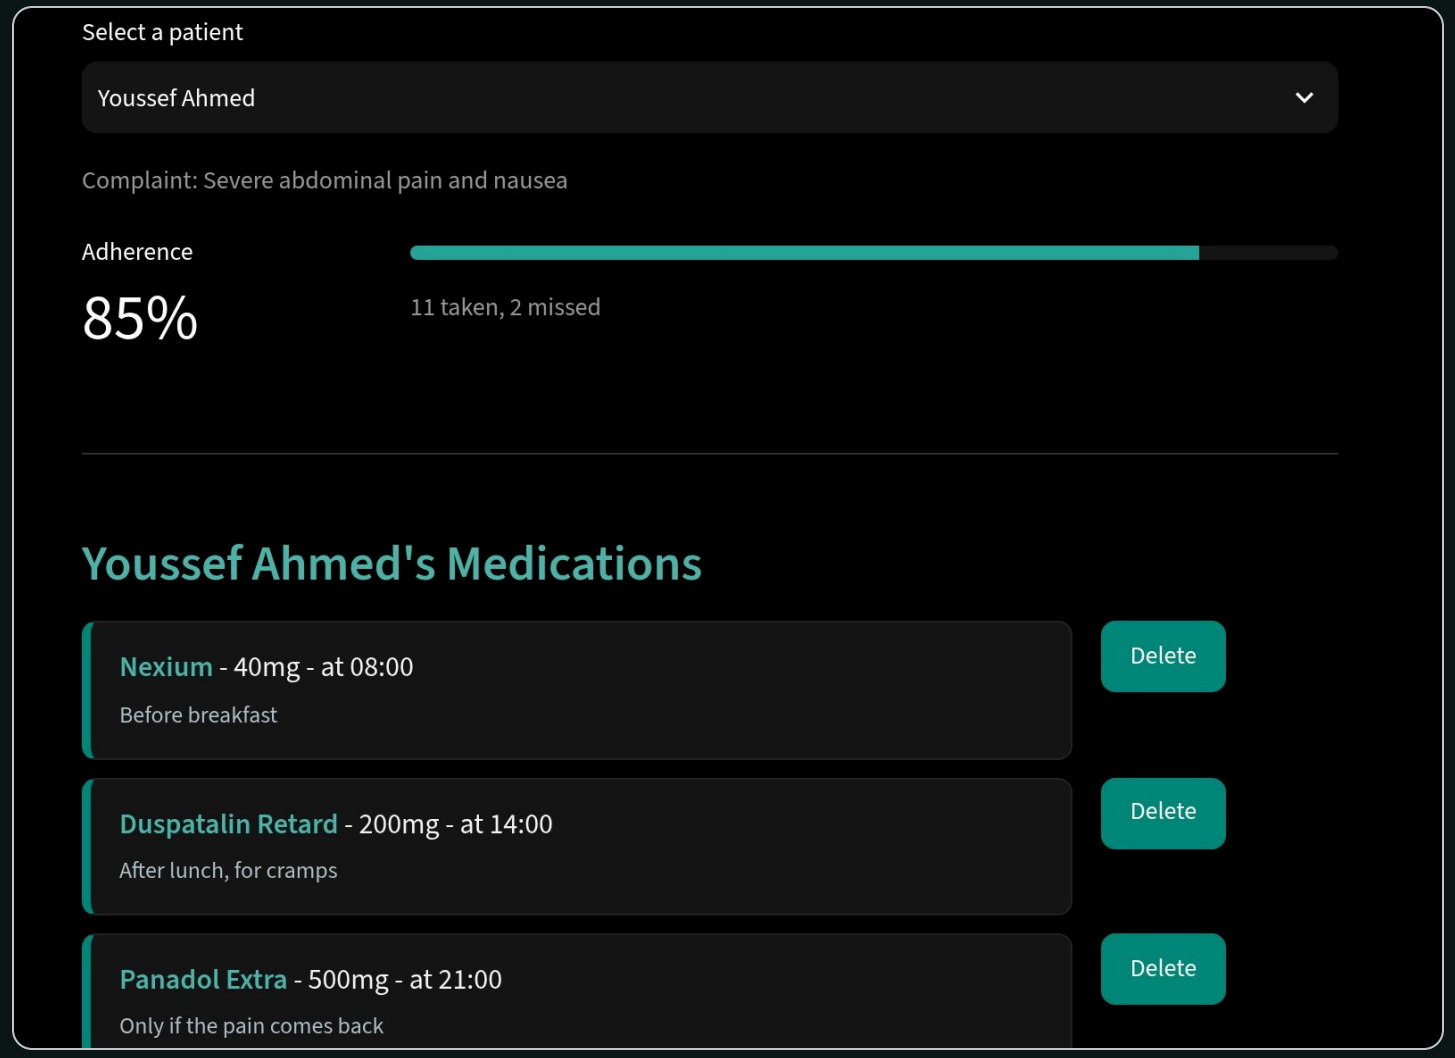

Assign Nurses: a doctor picks a nurse for each new patient and becomes their doctor.

02 · DEMO عرض

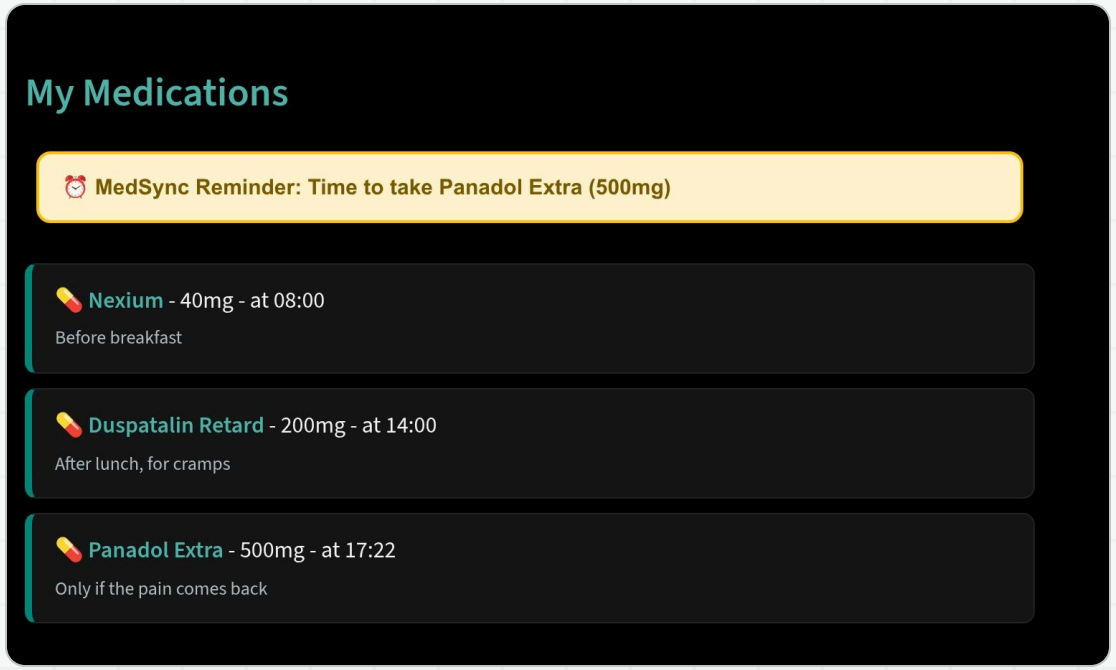

One tab for each patient.

- **Search and pick**
  Find a patient by name and see their complaint.
- **See adherence**
  Doses taken out of all marked doses, as % and a bar.
- **Prescribe**
  Search 207 medicines, set the dosage, time and notes.
- **Write visit notes**
  A diagnosis and notes for each visit, newest first.

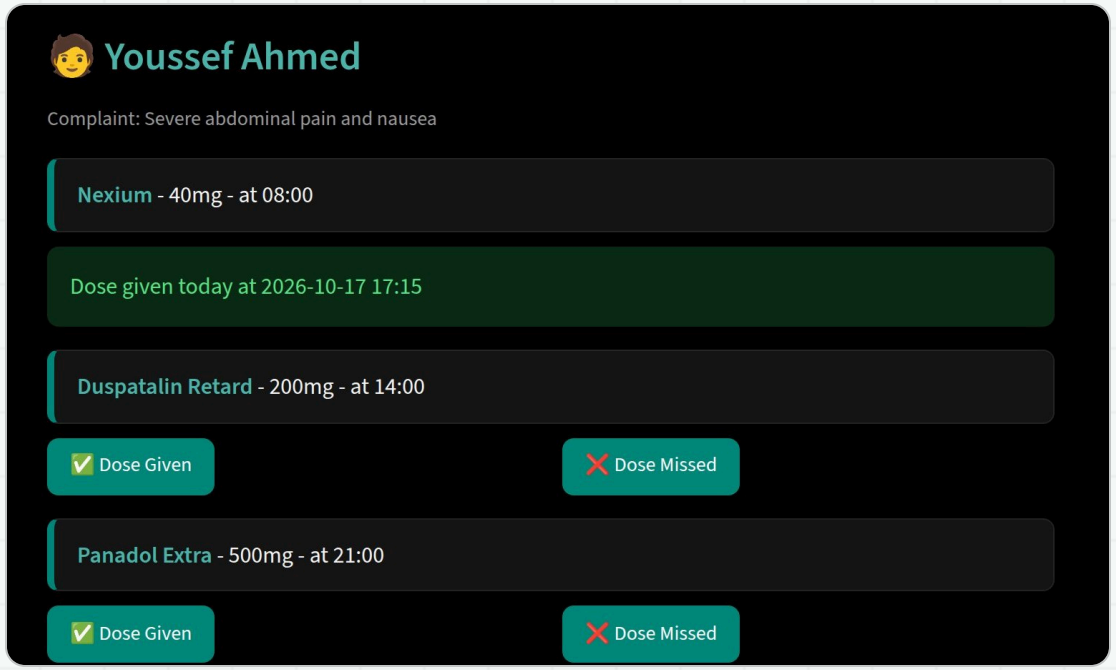

02 · DEMO عرض

Remind, then record.

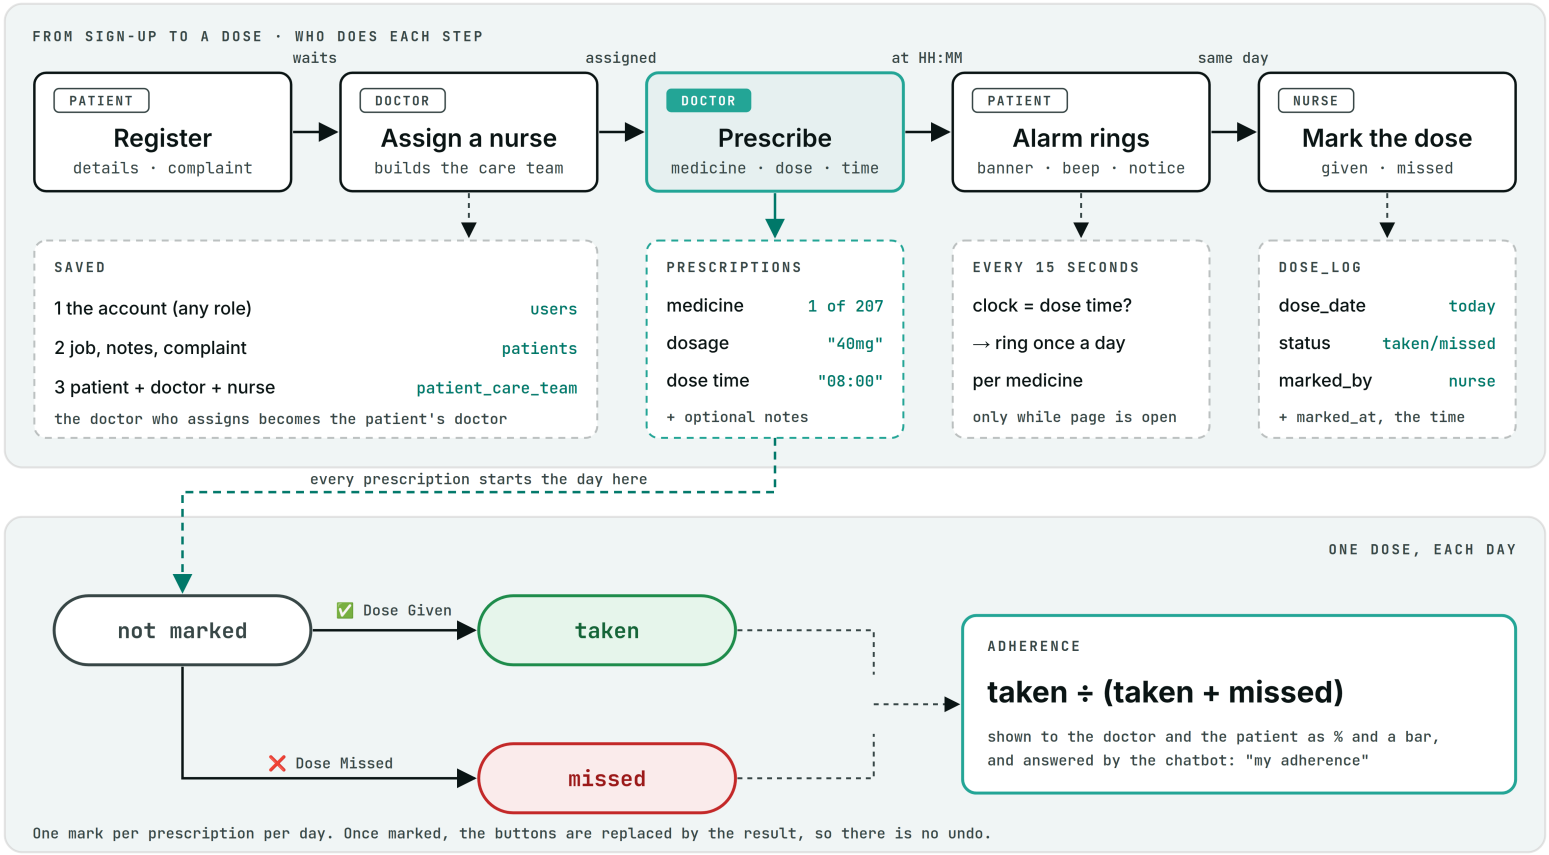

Patient: at dose time a banner, a beep and a browser notification.

Nurse: “Dose Given” or “Dose Missed” for each medicine, once a day.

A clock, a time, a mark.

15 seconds between alarm checks in the patient's browser

1 mark per medicine per day, by the nurse

2 results for a dose: taken or missed

Plain Python a beginner can follow.

HOW A PAGE KNOWS WHO YOU ARE

APP.PY
Prepare, then go to Login
Creates missing tables, loads the 207 medicines, removes orphans.

LOGIN.PY
Email + password + role
The chosen role must match the account's role, or login fails.

HOME.PY
One page, three faces
if role == "Doctor" … elif "Nurse" … elif "Patient" — plain if/elif.

Home and Chatbot send anyone who is not logged in back to Login. The sidebar lists all five pages to everyone.

2 packages to install: streamlit, google-genai

0 classes, lambdas, decorators or SQL JOINs

9 Python files, four of them pages

9 SQLite tables, from users to dose_log

Streamlit for the pages · SQLite for accounts, care teams, prescriptions and doses · Gemini for the chatbot.

WHY THE NAME سر الاسم

MedSync

“Med” is for medicine. “Sync” is for keeping the doctor, the nurse and the patient in sync: the same medicines, the same dose times, the same record. The two arrows around the pill in our logo show that sync.

Thank you.
